

Safety Network Controller

NX Series

Safety over
EtherCAT®

Quick, easy and flexible integration of production line safety

Scalable from large automotive production lines to small parts production lines

- Flexible safety system for large-scale production
- Interlocking between various machines

» Page 4

Quick and easy safety program design

- Reduce time required for design
- Reduce time required for verification

» Page 8

Efficient safety management and maintenance

- Minimize system downtime
- Reduce maintenance work

» Page 10

Manufacturers require flexible systems for global production and high-mix production. System designs have become more and more complicated because these flexible systems need safety control according to control programs. However, it is also required to reduce design and maintenance time to efficiently build various systems. In order to meet these needs, we offer a new NX Safety Network Controller.

Safety control for large systems

EtherNet/IP™

EtherNet/IP™ is a widely used and vendor-independent industrial Ethernet network that is managed by ODVA.

The Common Industrial Protocol (CIP™) is an industry standard open network, enabling seamless communication among CIP networks. CIP Safety™ adds safety functionality to CIP networks.

EtherCAT®

EtherCAT® is an industrial real-time communication network promoted by EtherCAT Technology Group (ETG).

Safety over EtherCAT®

Safety over EtherCAT (FSaE) allows a single communication system to be used for both control and safety data.

Flexible safety system for large-scale production

EtherNet/IP for safety across the world

Production systems have to meet worldwide standards because of the globalization of production.

CIP Safety is a protocol for transmitting safety data via EtherNet/IP that is adopted by factory automation and robot manufacturers all over the world. Using CIP Safety, you can build globally standardized networks and simplify the global procurement of production systems.

One connection using CIP Safety

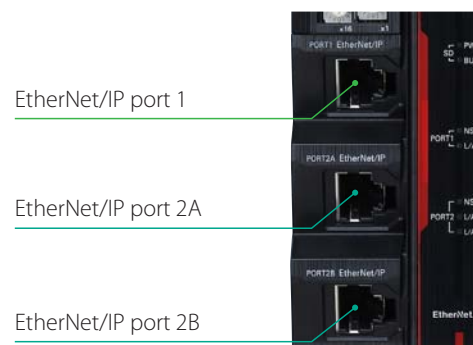

Safety systems for industrial robots are becoming increasingly used; networks can be easily built with the NX-CSG Communication Control Unit and NX-SL5 Safety CPU Units which support CIP Safety.

EtherNet/IP brings flexibility

Multiple network ports enable a safety network to be divided into several segments, making it easy to connect many network devices required for a large production line. This allows flexibility to add or remove devices from existing safety systems.

Safety control between lines : Port 1
Robot control within process : Port 2A, 2B

Fast and fixed response cycle facilitates reconfiguration

The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit provide safety communications via CIP safety and at the same time provides local high-speed safety I/O control. With a local I/O response time as low as every 50 ms, the NX-SL5 Safety CPU Unit can be used for applications where a high level of responsiveness is required.

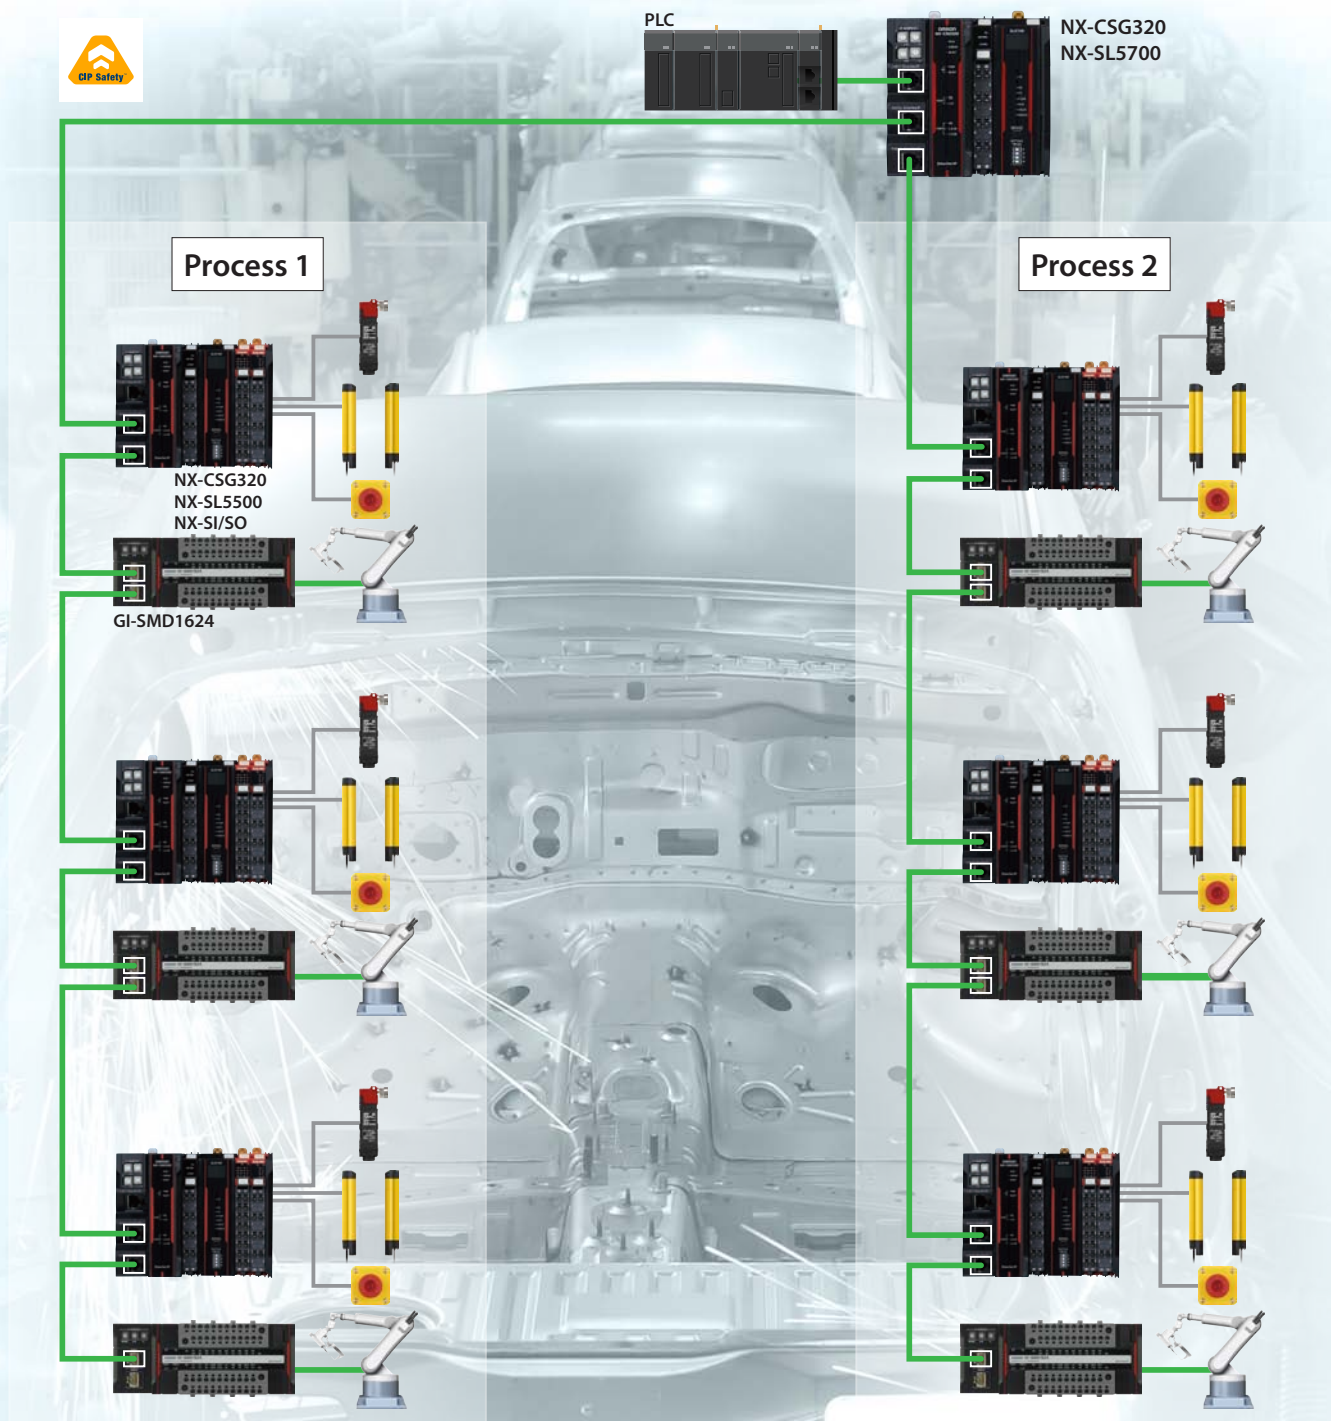

* Calculate the response speed of your system taking the performance of I/O devices into consideration. Refer to the manual for details.

Standardize the safety system network for a large robot system

System configuration

In this example, devices and machines communicate via EtherNet/IP and CIP Safety in this system. Each process includes robots, safety light curtains, emergency stop switches, and other safety components. The NX-CSG Communication Control Unit and NX-SL5 Safety CPU Unit execute safety control programs in each process. CIP Safety is used for safety interlocking between processes and for building a safety control network across the system.

Interlocking between various machines

Simple configuration

CIP Safety allows safety devices and standard devices to be mixed on the same network, providing safety interlock control between machines. CIP Safety robots and remote I/O terminals can be easily connected.

Modular processes bring flexibility to line layouts

The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit exchange interlock signals with other machines while implementing safety control within the machine. Programs for machine control and safety control can be created for each machine. This modularized design helps standardize design and improve design efficiency.

Modular machines with individual CPU units

System configuration

Machine 1 and 3 are processing machines with the control program and safety control program for each machine. Machine 2 is a material handling machine that transports products processed by Machine 1 and 3 to the next process. The NX-CSG320 Communication Control Unit and NX-SL5 Safety CPU Unit are used for all machines, and CIP Safety is used for safety interlocking between machines.

Two different networks in a single system

The NX-SL5 Safety CPU Unit connected with the NX102 Machine Automation Controller enables the use of both EtherCAT + FSoE (Safety over EtherCAT) and EtherNet/IP + CIP Safety at the same time.

In addition to interlock control within a machine via FSoE, safety interlock between machines can be implemented using CIP Safety.

Integrated safety into high-speed machine control

The NX-SL5 Safety CPU Unit combination with the NX102 Machine Automation Controller, provides both safety control and machine control with fast cycle times.

By mounting the NX-SL Safety CPU Unit and safety I/O units to the NX102 and by connecting the servo drives via FSoE on EtherCAT, you can configure a simple motion and safety control system using high-speed networks.

Line safety control and fast machine control at the same time

System configuration

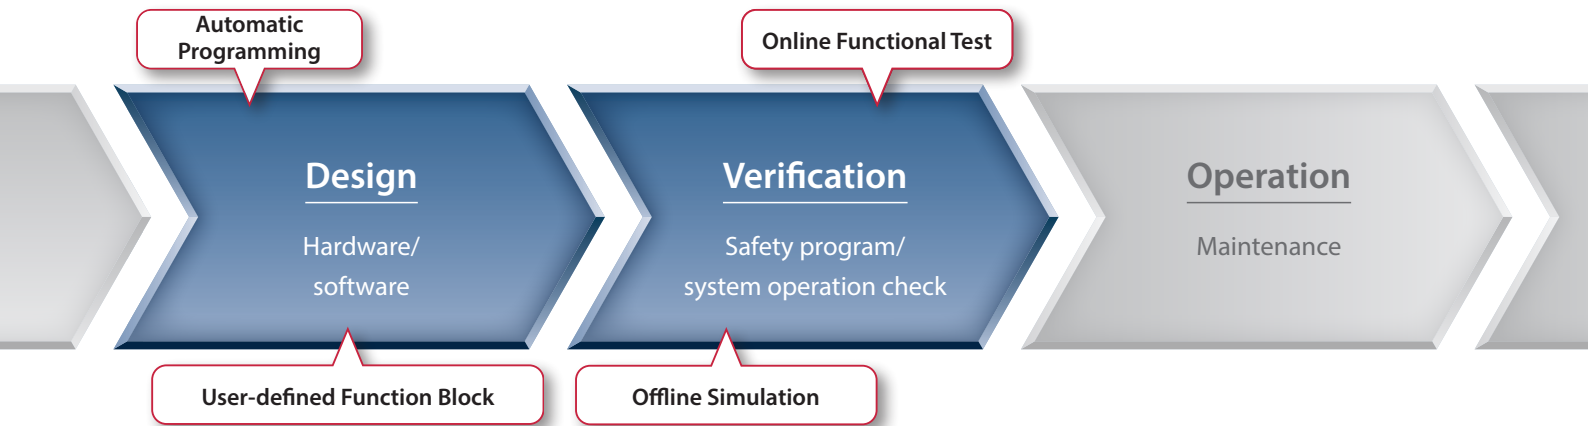

The NX102 Machine Automation Controller and NX-SL5 Safety CPU Unit are used in Machine 1 and 2 to build a system with safety network and real-time control capabilities using EtherCAT. The machine status is reported to the host system and displayed on the HMI connected on the same network.

* Understand the connection specifications of devices which are used in the system before creating a network.

Improve design productivity

The Automation Software Sysmac Studio provides various functionalities to reduce time required for production system design and safety program verification.

Design Reduce time required for production system design

Automatic Programming

Create a truth table using input, output, and stop conditions of safety devices to automatically create a safety program for a simple machine.

* Programs created by Automatic Programming will not guarantee functional safety. Refer to the User's Manual (Cat. No. Z395) for details.

User-defined Function Block (FB)

Programs can be easily converted into a user-defined function block (FB); help files can be attached to describe input and output conditions as well as the functionality of the program within the function block (FB). Different security levels can be set to protect the function block from viewing and unauthorized modifications.

* User-defined FBs can be used as modular software components according to the hardware configuration. They help standardize programs and maintain the consistency of design quality.

Verification

Implement safety management without experts and global standardization

Offline Simulation

Programs can be simulated on your PC, Sysmac Studio allows verification of programs without connecting hardware.

Online Functional Test

Online Functional Test enables operation of safety functions to be checked when the NX-SL5 Safety CPU Unit is online with Sysmac Studio. The test results can be output as a report along with the safety signature; the safety signature is displayed on the seven-segment display of the NX-SL5 Safety CPU Unit, and can easily be checked if the configuration matches the report after the program has been validated.

Safety Signature:#BF32

[Preparation]
Start the Sysmac Studio and go online with the NX-SL5. Register the safety devices to test and set the expected values of each signal.

[Testing]
Operate safety devices by following the instructions on the screen. Check if each device operates correctly and input the check results.

[Tests completed]
The test results are listed after all tests have been completed. The list can be output as a CSV file.

[Printing test results]
The test details, results, and executed date and time can be output as a PDF file. The names of the tester and approver can be added. The safety signature code, which identifies the validated program, is included at the bottom right of the report.

Maintenance without PC

No PC is required for maintenance, which reduces production system maintenance work and minimizes system downtime.

Operation Minimize system downtime

Safety Data Logging

An SD memory card containing logging settings is used for Safety Data Logging.

When start trigger conditions are met, the specified device variables and exposed variables can be logged in a chronological order and output to the SD memory card. This function helps to quickly identify the cause of a sudden stoppage of the system and determine preventive measures.

Operation Reduce maintenance work

Safety Unit Restore

Programs and settings can be stored on an SD memory card inserted into the communication control unit. When the safety CPU unit is replaced, the stored programs and settings can be easily copied to a new unit using the SD memory card.

ACR (Automatic Configuration Restart)

When replacing a safety I/O unit, just remove the old unit and mount a new one. The setting data is automatically downloaded. When replacing a safety I/O terminal, remove the memory cassette from the old terminal and install it into the new terminal to inherit the settings. No software is required. (See page 34)

NX-series Communication Control Unit/Safety Control Units

NX-CSG/SL5/SI/SO

Quick, easy, and flexible to integrate safety into production lines

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

- Two built-in CIP Safety on EtherNet/IP ports
 - Up to 254 connections (NX-SL5700)
 - Up to 32 NX Units per Communication Control Unit
 - Innovative automation software
 - Automatic Programming
 - Safety Data Logging
 - Online Functional Test
 - Meets EN ISO 13849-1 (PLe/Safety Category 4) and IEC 61508 (SIL3)
- * The Common Industrial Protocol (CIP™) is an industry standard open network, enabling seamless communication among CIP networks. CIP Safety™ adds safety functionality to CIP networks.
- * Safety over EtherCAT (FSoE): The open protocol Safety over EtherCAT (abbreviated with FSoE "Safety over EtherCAT") defines a safety related communication layer for EtherCAT. Safety over EtherCAT meets the requirements of IEC 61508 SIL 3 and enables the transfer of safe and standard information on the same communication system without limitations with regard to transfer speed and cycle time.

Features

- CIP Safety on EtherNet/IP Is Supported
- Feature EtherNet/IP Communications Port
- The Standard Unit of NX-series Available
- Excellent Connectability with OMRON Safety I/O Devices
- Support for the IEC 61131-3 Programming Environment
 - Program Languages Based on the IEC 61131-3 International Standard
 - Programming with Variables
- Complete Advanced Validation
 - Checking Safety Programs and Safety Parameters
 - Debugging

CPU Rack Configuration

The following shows the CPU Rack Configuration, where NX Units are mounted to a CPU Rack. The CPU Rack is configured with a Communication Control Unit, a Safety CPU Unit, Safety I/O Units, other NX Units, and an End Cover mounted to it. The number of NX Unit connections is up to 32 units.

| Configuration | | Remarks |
|--------------------------------------|---------------------------|---|
| Communication Control Unit NX-CSG | | One required for every CPU Rack. |
| End Cover | | Must be connected to the right side of the CPU Rack. One end cover is provided with the Communication Control Unit as a standard accessory. |
| NX Unit | Safety CPU Unit NX-SL5 | Up to 32 units can be mounted onto the CPU Rack. One Safety CPU Unit is required for each CPU Rack. Refer to <i>NX-series Safety Control Unit/Communication Control Unit User's Manual</i> (Cat. No. Z395) for the NX Units that you can connect. |
| | Safety Input Unit | |
| | Safety Output Unit | |
| | Other NX Units | |
| SD Memory Card | | Install as required. |

Ordering Information

NX-series Communication Control Unit

| Unit type | Appearance | Supported communications protocol | Number of communications connectors | Network variables | Unit version | Model |
|----------------------------|---|-----------------------------------|-------------------------------------|-------------------|--------------|------------------|
| Communication Control Unit |  | EtherNet/IP *1 | 3 | 2 *2 | Ver. 1.01 | NX-CSG320 |

Note: One NX-END02 End Cover is provided with the NX-CSG320 Communication Control Unit.

*1. Routing of the CIP Safety protocol is supported.

*2. PORT1 is an independent port. PORT2A and PORT2B are the ports with a built-in Ethernet switch.

NX-series Safety Control Units

Safety CPU Units

| Unit type | Appearance | Specifications | | | | Unit version | Model |
|-----------------------------|---|-------------------------------------|------------------|----------------------------------|-----------------------|--------------|------------------|
| | | Maximum number of safety I/O points | Program capacity | Number of safety I/O connections | I/O refreshing method | | |
| Safety CPU Unit (NX-SL5□□□) |  | 1024 points | 2048 KB | 128 | Free-Run refreshing | Ver. 1.4 | NX-SL5500 |
| |  | 2032 points | 4096 KB | 254 | Free-Run refreshing | Ver. 1.4 | NX-SL5700 |

Note: Refer to your local OMRON website for details of the NX-SL3□□□ Safety CPU Unit.

Safety Input Units

| Unit type | Appearance | Specifications | | | | | | | Unit version | Model |
|--------------------|---|-------------------------------|------------------------------|----------------------|---------------------|------------------------------------|------------------------------------|-----------------------|--------------|------------------|
| | | Number of safety input points | Number of test output points | Internal I/O common | Rated input voltage | OMRON special safety input devices | Number of safety slave connections | I/O refreshing method | | |
| Safety Input Units |  | 4 points | 2 points | Sinking inputs (PNP) | 24 VDC | Cannot be connected. * | 1 | Free-Run refreshing | Ver. 1.1 | NX-SIH400 |
| |  | 8 points | 2 points | Sinking inputs (PNP) | 24 VDC | Cannot be connected. | 1 | Free-Run refreshing | Ver. 1.0 | NX-SID800 |

* The following OMRON special safety input devices can be connected directly without a special controller.

For detail of connectable OMRON special safety input devices, refer to *NX-series User's Manual Safety Control Unit/Communication Control Unit* (Cat. No. Z395).

| Type | Model and corresponding PL and safety category |
|----------------------------------|--|
| OMRON Single-beam Safety Sensors | E3ZS |
| OMRON Non-contact Door Switches | D40Z D40A |
| OMRON Safety Mats | UM, UMA * |
| OMRON Safety Edges | SGE (4-wire connection) |

* The UM Series was discontinued at the end of June 2019.

Safety Output Units

| Unit type | Appearance | Specifications | | | | | | Unit version | Model |
|---------------------|---|--------------------------------|------------------------|--|---------------|------------------------------------|-----------------------|--------------|------------------|
| | | Number of safety output points | Internal I/O common | Maximum load current | Rated voltage | Number of safety slave connections | I/O refreshing method | | |
| Safety Output Units |  | 2 points | Sourcing outputs (PNP) | 2.0 A/point, 4.0 A/Unit at 40°C, and 2.5 A/Unit at 55°C The maximum load current depends on the installation orientation and ambient temperature. | 24 VDC | 1 | Free-Run refreshing | Ver. 1.0 | NX-SOH200 |
| |  | 4 points | Sourcing outputs (PNP) | 0.5 A/point and 2.0 A/Unit | 24 VDC | 1 | Free-Run refreshing | Ver. 1.0 | NX-SOD400 |

Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

| Product name | Specifications | Number of licenses | Media | Model |
|---|---|---------------------|---------------------------|-------------------------|
| | | | | |
| Sysmac Studio Safety Edition *1 Ver. 1.□□ | Sysmac Studio Safety Edition is a license including necessary setting functions for the safety control system. *This product is a license only. You need the Sysmac Studio Standard Edition DVD media to install it. | 1 license | --- | SYSMAC-FE001L |
| Sysmac Studio Standard Edition *2 Ver. 1.□□ | Sysmac Studio runs on the following OS. Windows 7(32-bit/64-bit version)/8(32-bit/64-bit version)/8.1(32-bit/64-bit version)/10(32-bit/64-bit version) *3 | --- (Media only) | Sysmac Studio (32bit) DVD | SYSMAC-SE200D |
| | | --- (Media only) | Sysmac Studio (64bit) DVD | SYSMAC-SE200D-64 |

Note: For details of the Automation Software Sysmac Studio, refer to your local OMRON website.

*1. The Safety Edition can be used with the Communication Control Unit and EtherNet/IP Coupler Unit.

*2. The Sysmac Studio Standard Edition License (SYSMAC-SE2□□L) includes functions that the Safety Edition (SYSMAC-FE001L) provides.
The Communication Control Unit can be used with the Sysmac Studio version 1.24 or higher.

*3. Model "SYSMAC-SE200D-64" runs on Windows 10 (64bit).

Optional Products

The NX-series Communication Control Units and the NX-series Safety Control Units are also registered for RCM, EAC, and KC compliance.

General Specifications

| Item | | Specification |
|-----------------------|-------------------------------|---|
| Enclosure | | Mounted in a panel (open) |
| Grounding method | | Ground to 100 Ω or less |
| Operating environment | Ambient operating temperature | 0 to 55°C |
| | Ambient operating humidity | 10% to 95% (with no condensation or icing) |
| | Atmosphere | Must be free from corrosive gases. |
| | Ambient storage temperature | -25 to 70°C (with no condensation or icing) |
| | Altitude | 2,000 m max. |
| | Pollution degree | 2 or less |
| | Noise immunity | Conforms to IEC 61131-2. 2 kV on power supply line |
| | Insulation class | Class III (SELV) |
| | Overvoltage category | II |
| | EMC immunity level | Zone B |
| | Vibration resistance | Conforms to IEC 60068-2-6. 5 to 8.4 Hz with 3.5-mm amplitude 8.4 to 150 Hz, acceleration of 9.8 m/s ² 100 minutes each in X, Y, and Z directions (10 sweeps of 10 min each = 100 min total) |
| | Shock resistance | Conforms to IEC 60068-2-27. 147 m/s ² , 3 times each in X, Y, and Z directions |
| Installation method | Insulation resistance * | 20 MΩ between isolated circuits (at 100 VDC) |
| | Dielectric strength * | 510 VAC for 1 min between isolated circuits, leakage current: 5 mA max. |
| Installation method | | DIN Track (IEC 60715 TH35-7.5/TH35-15) |

* The specification is for the Communication Control Unit, Safety Input Unit, and Safety Output Unit, not for the Safety CPU Unit.

| Installation orientation and restrictions | | Only upright installation orientation |

*1. Includes the End Cover, and does not include projecting parts.

*2. Includes the End Cover. The weight of the End Cover is 82 g.

*3. Includes the SD Memory Card. The NX Unit power consumption to NX Units is not included.

*4. This is the inrush current value when the power supply turns ON after it has been OFF.

The inrush current may vary depending on the operating condition and other conditions. Therefore, select fuses, breakers, and external power supply devices that have enough margin in characteristic and capacity, considering the condition under which the devices are used.

Especially when you turn the power ON/OFF through a switch inserted to the external DC power supply, cycling power ON-OFF-ON within one second will cause the inrush current of approx. 30 A/0.3 mA to occur since the inrush current limiter circuit fails to limit the current.

*5. The amount of current that can be passed constantly through the terminal. Do not exceed this current value when you use a through-wiring for the Unit power supply.

*6. The actual configurable number can be calculated as follows: 254 - <Number of CIP Safety connections configured> - <Number of FSoE connections configured>

Built-in EtherNet/IP Port Specifications

The following table shows the specifications of the built-in EtherNet/IP port of the Communication Control Unit.

| Item | | Specification |
|---|--|--|
| | | NX-CSG-□□□ |
| Communications protocol | | TCP/IP or UDP/IP |
| Supported services | | Sysmac Studio connection, tag data links, CIP message communications, FTP server, automatic clock adjustment (NTP client), SNMP (agent), DNS (client), BOOTP (client), TCP/UDP message service |
| Number of logical ports | | 2 (With IP routing function) |
| Physical layer | | 100Base-TX or 10Base-T (100Base-TX is recommended.) *1 |
| Transmission specifications | Media access method | CSMA/CD |
| | Modulation | Baseband |
| | Transmission paths | Star form |
| | Baud rate | 100 Mbps (100BASE-TX) |
| | Transmission media | Shielded twisted-pair (STP) cable, Category 5, 5e or higher |
| | Transmission distance | 100 m max. (distance between hub and node) |
| | Number of cascade connections | The built-in switching ports support up to 50 nodes. There is no limitation when an external Ethernet switch is used. |
| CIP Safety routing | Maximum number of routable CIP Safety connections | 254 total For multi-cast connections, 128 total |
| | Maximum routable Safety data length per connection | 32 bytes |
| CIP service: Tag data links (cyclic communications) | Number of connections | 32/Logical ports (total of 64 with two logical ports) |
| | Packet interval (refresh cycle) | 1 to 10,000 ms in 1-ms increments Packet intervals can be set independently for each connection. (Data is refreshed over the network at preset intervals and does not depend on the number of nodes.) |
| | Allowed communications bandwidth per Unit | 12,000 pps *2 Note: The heartbeat and CIP Safety routing are included. |
| | Number of registrable tags | 1024/Logical ports (total of 2048 with two logical ports) |
| | Tag types | Network variables |
| | Number of tags per connection (=1 tag set) | 32 (31 tags if Controller status is included in the tag set.) |
| | Maximum link data size per node | 46,208 bytes/Logical ports 92,416 bytes total |
| | Maximum data size per connection | 1,444 bytes *3 |
| | Number of registrable tag sets | Data concurrency is maintained within each connection. 32 per port (1 connection = 1 tag set) (total of 40 with two logical ports) *4 |
| | Maximum size of 1 tag set | 1,444 bytes (Two bytes are used if Controller status is included in the tag set.) |
| | Multi-cast packet filter *5 | Supported. |
| CIP message service: Explicit messages *6 | Class 3 (number of connections) | Connections: 16/Logical ports (total of 32 with two logical ports) (server only) |
| | UCMM (unconnected) | Maximum number of clients that can communicate at one time: 16 per port (total of 32 with two logical ports) Maximum number of servers that can communicate at one time: 16 per port (total of 32 with two logical ports) |
| TCP/UDP message service | Maximum number of clients that can communicate at one time | 16 per port (total of 32 with two logical ports) |
| | Maximum message size | Request: 492 bytes Response: 496 bytes |
| SNMP | Agent | SNMPv1, SNMPv2c |
| | MIB | MIB-II |
| EtherNet/IP conformance test | | Conforms to CT14 |
| Ethernet interface | | 10BASE-T or 100BASE-TX Auto negotiation or fixed settings |

*1. If tag data links are being used, use 100Base-TX.

*2. Here, pps means "packets per second" and indicates the number of packets that can be processed in one second.

*3. To use a data size of 505 bytes or higher, the system must support a large forward open (an optional CIP specification).

The CS, CJ, NJ, and NX-series Units support a large forward open, but before connecting to nodes of other companies, confirm that those devices also support it.

*4. If more than 40 tag sets are registered in total, the *Tag Data Link, Too Many Tag Sets Registered (840E0000 hex)* event will occur.

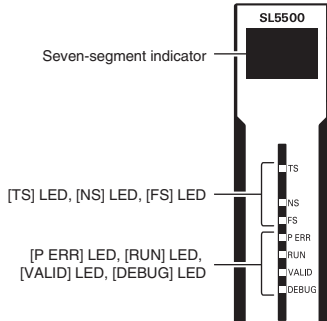

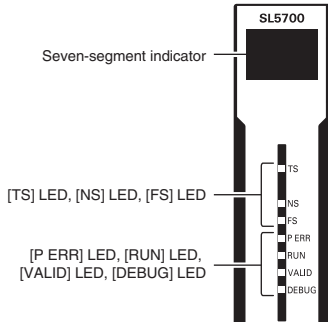

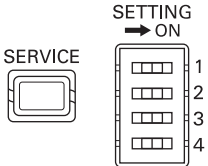

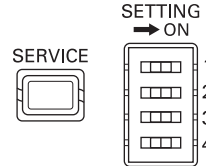

*5. Because the built-in EtherNet/IP port is equipped with an IGMP client (version 2), unnecessary multicast packets can be filtered out by an Ethernet switch that supports IGMP Snooping.

*6. The built-in EtherNet/IP port uses the TCP/UDP port numbers shown in the following table.
Do not set the same port number for more than one TCP/UDP service.

| Service | Type | Port number | Remarks |
|---------------------------------|---------|-------------|---|
| Tag data links | UDP | 2222 | Fixed values |
| Used by system | UDP | 2223, 2224 | |
| | TCP | 9610 | |
| CIP messages | TCP | 44818 | |
| FTP client (Data transfer port) | TCP | 20 | |
| DNS client | TCP/UDP | 53 | |
| BOOTP client | UDP | 68 | |
| HTTP server | TCP | 80 | You can change the port number in the Unit Settings on the Sysmac Studio. |
| Used by system, other | TCP/UDP | 9600 | |
| FTP client (Control port) | TCP | 21 | |
| TCP/UDP message service | TCP/UDP | 64000 | |
| NTP client | UDP | 123 | |
| SNMP agent | UDP | 161 | |
| SNMP trap | UDP | 162 | |

Safety Control Units

Safety CPU Units NX-SL5500/SL5700

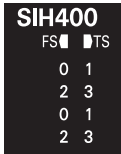

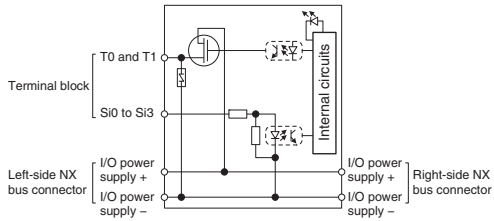

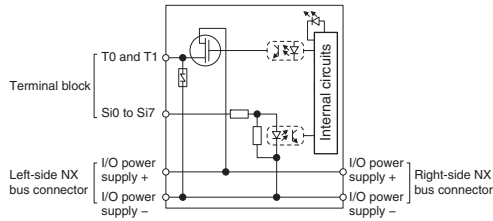

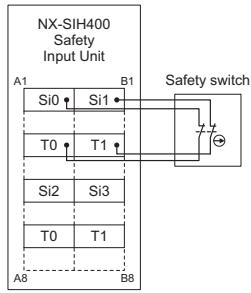

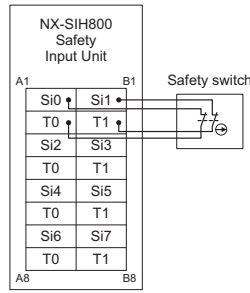

| Unit name | Safety CPU Unit | |
|--|--|--|
| Model | NX-SL5500 | NX-SL5700 |
| Maximum number of safety I/O points | 1024 points | 2032 points |
| Program capacity | 2048 KB | 4096 KB |
| Number of safety master connections *1 | 128 | 254 |
| Number of CIP Safety originator connections | 128 | 254 |
| Number of CIP Safety target connections | 4 | 4 |
| Number of originators that can be connected with a multi-cast connection | 8 | 8 |
| Number of FSoE master connections | 128 | 254 |
| I/O refreshing method | Free-Run refreshing | |
| External connection terminals | None | |
| Indicators | <p>[TS] indicator, [NS] indicator, [FS] indicator, [P ERR] indicator, [RUN] indicator, [VALID] indicator, [DEBUG] indicator, seven-segment indicator</p>  | <p>[TS] indicator, [NS] indicator, [FS] indicator, [P ERR] indicator, [RUN] indicator, [VALID] indicator, [DEBUG] indicator, seven-segment indicator</p>  |
| Hardware switch settings | <p>[SERVICE] switch, [SETTING] switch</p>  | <p>[SERVICE] switch, [SETTING] switch</p>  |
| Dimensions | 30 × 100 × 71 mm (W × H × D) | |
| I/O power supply method | Not supplied. | |
| Current capacity of I/O power supply terminals | No I/O power supply terminals | |
| NX Unit power consumption | 3.35 W max. *2 | |
| Current consumption from I/O power supply | No consumption | |
| Weight | 130 g max. | |
| Installation orientation and restrictions | Installation orientation: Upright installation Restriction *3: None. | |

*1. This is the maximum number of Safety I/O connections that can be set to this Unit. The value is the total number of CIP Safety originator connections, CIP Safety target connections, and FSoE master connections.

*2. The cable length for the Units (Communication Control Unit and Power Supply Unit for NX Units) that supply power to the corresponding Unit must be up to 20 m.

*3. Only NX102 CPU Units and Communication Control Units can be connected. NX1P2 CPU Units or Communications Coupler Units cannot be connected.

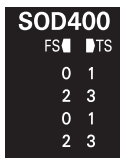

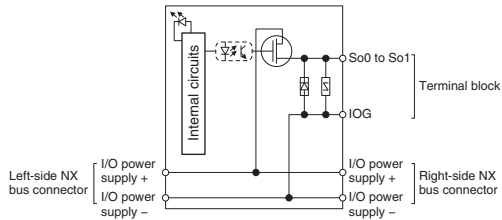

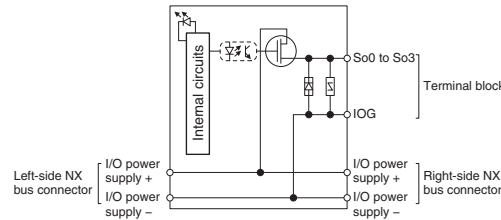

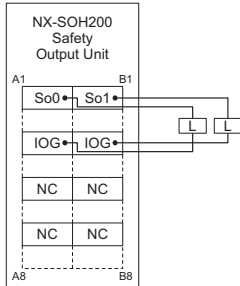

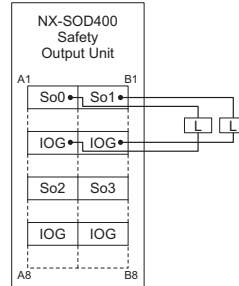

Safety Input Units NX-SIH400/SID800

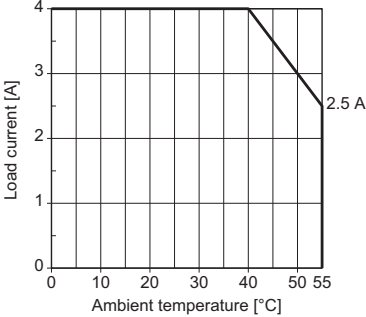

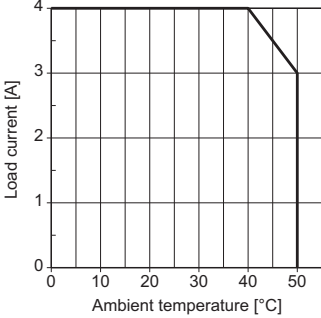

| Unit name | Safety Input Unit | |
|--|---|--|
| Model | NX-SIH400 | NX-SID800 |
| Number of safety input points | 4 points | 8 points |
| Number of test output points | 2 points | 2 points |
| Internal I/O common | PNP (sinking inputs) | |
| Rated input voltage | 24 VDC (20.4 to 28.8 VDC) | |
| OMRON special safety input devices | Can be connected. | Cannot be connected. |
| Number of safety slave connections | 1 | |
| I/O refreshing method | Free-Run refreshing | |
| External connection terminals | Screwless clamping terminal block (8 terminals) | Screwless clamping terminal block (16 terminals) |
| Indicators | [TS] indicator, [FS] indicator, [IN] indicator, [IN ERR] indicator  | [TS] indicator, [FS] indicator, [IN] indicator, [IN ERR] indicator  |
| Safety input current | 4.5 mA TYP. | 3.0 mA TYP. |
| Safety input ON voltage | 11 VDC min. | 15 VDC min. |
| Safety input OFF voltage/OFF current | 5 VDC max., 1 mA max. | |
| Test output type | Sourcing outputs (PNP) | |
| Test output load current | 25 mA max. | 50 mA max. |
| Test output residual voltage | 1.2 V max. (Between IOV and all output terminals) | |
| Test output leakage current | 0.1 mA max. | |
| Dimensions | 12 × 100 × 71 mm (W × H × D) | |
| Isolation method | Photocoupler isolation | |
| Insulation resistance | 20 MΩ min. between isolated circuits (at 100 VDC) | |
| Dielectric strength | 510 VAC for 1 min between isolated circuits, leakage current: 5 mA max. | |
| I/O power supply method | Power supplied from the NX bus | |
| Current capacity of I/O power supply terminals | No applicable terminals. | |
| NX Unit power consumption | <ul style="list-style-type: none"> Connected to a CPU Unit or a Communication Control Unit 1.10 W max. Connected to a Communications Coupler Unit 0.70 W max. | <ul style="list-style-type: none"> Connected to a CPU Unit or a Communication Control Unit 1.10 W max. Connected to a Communications Coupler Unit 0.75 W max. |
| Current consumption from I/O power supply | 20 mA max. | |
| Weight | 70 g max. | |
| Circuit layout |  |  |
| Terminal connection diagram | <p>Si0 to Si3: Safety input terminals T0 and T1: Test output terminals</p>  <p>Refer to User's manual (Cat. No. Z395) for details.</p> | <p>Si0 to Si7: Safety input terminals T0 and T1: Test output terminals</p>  <p>Refer to User's manual (Cat. No. Z395) for details.</p> |

| Unit name | Safety Input Unit |
|--|---|
| Installation orientation and restrictions | Installation orientation: <ul style="list-style-type: none"> • Connected to a CPU Unit or a Communication Control Unit * • Possible in the upright installation orientation. • Connected to a Communications Coupler Unit 6 possible orientations. Restrictions: Maximum ambient temperature is 50°C for any orientation other than upright installation. |
| Protective functions | Overvoltage protection circuit and short detection (test outputs) |

* Only NX102 CPU Units and Communication Control Units can be connected. NX1P2 CPU Units cannot be connected.

Safety Output Units NX-SOH200/SOD400

| Unit name | Safety Output Unit | |
|--|---|---|
| Model | NX- SOH200 | NX- SOD400 |
| Number of safety output points | 2 points | 4 points |
| Internal I/O common | PNP (sourcing outputs) | |
| Maximum load current | 2.0 A/point 4.0 A/Unit at 40°C 2.5 A/Unit at 55°C The maximum load current depends on the installation orientation and ambient temperature | 0.5 A/point and 2.0 A/Unit |
| Rated voltage | 24 VDC (20.4 to 28.8 VDC) | |
| Number of safety slave connections | 1 | |
| I/O refreshing method | Free-Run refreshing | |
| External connection terminals | Screwless clamping terminal block (8 terminals) | |
| Indicators | [TS] indicator, [FS] indicator, [OUT] indicator, [OUT ERR] indicator  | [TS] indicator, [FS] indicator, [OUT] indicator, [OUT ERR] indicator  |
| Safety output ON residual voltage | 1.2 V max. (Between IOV and all output terminals) | |
| Safety output OFF residual voltage | 2 V max. (Between IOG and all output terminals) | |
| Safety output leakage current | 0.1 mA max. | |
| Dimensions | 12 × 100 × 71 mm (W × H × D) | |
| Isolation method | Photocoupler isolation | |
| Insulation resistance | 20 MΩ min. between isolated circuits (at 100 VDC) | |
| Dielectric strength | 510 VAC for 1 min between isolated circuits, leakage current: 5 mA max. | |
| I/O power supply method | Power supplied from the NX bus | |
| Current capacity of I/O power supply terminals | IOG: 2 A max./terminal | IOG (A3 and B3): 2 A max./terminal IOG (A7 and B7): 0.5 A max./terminal |
| NX Unit power consumption | <ul style="list-style-type: none"> Connected to a CPU Unit or a Communication Control Unit 1.05 W max. Connected to a Communications Coupler Unit 0.70 W max. | <ul style="list-style-type: none"> Connected to a CPU Unit or a Communication Control Unit 1.10 W max. Connected to a Communications Coupler Unit 0.75 W max. |
| Current consumption from I/O power supply | 40 mA max. | 60 mA max. |
| Weight | 65 g max. | |
| Circuit layout |  |  |

* Only NX102 CPU Units and Communication Control Units can be connected. NX1P2 CPU Units cannot be connected.

Function Specifications

Refer to your local OMRON website for function specifications of the Communication Control Unit and Safety Control Unit.

Version Information

Relationship between the Unit Versions of Safety Control Units and Sysmac Studio Versions

This section describes the combinations that can be used of the unit versions of the Safety Control Unit and the Communication Control Unit, and the version of the Sysmac Studio.

Safety Control Units

| NX Unit | | Corresponding unit version/version | |
|-----------|--------------|------------------------------------|---------------|
| Model | Unit version | Communication Control Unit | Sysmac Studio |
| NX-SL5500 | Ver.1.3 | Ver.1.01 | Ver.1.24 |
| | Ver.1.4 | | Ver.1.40 |
| NX-SL5700 | Ver.1.2 | Ver.1.00 only | Ver.1.24 |
| | Ver.1.3 | Ver.1.01 | |
| | Ver.1.4 | | Ver.1.40 |
| NX-SIH400 | Ver.1.0 | Ver.1.00 | Ver.1.24 |
| NX-SIH400 | Ver.1.1 | | |
| NX-SID800 | Ver.1.0 | | |
| NX-SOH200 | | | |
| NX-SOD400 | | | |

Configuration Unit

Refer to the user's manuals for information on the NX Units that can be connected to the NX-series Communication Control Unit.

Communication Control Unit

| Unit | Model |
|----------------------------|-----------|
| Communication Control Unit | NX-CSG320 |

Safety Control Units

| Unit | Model |
|--------------------|----------------------|
| Safety CPU Unit | NX-SL5500, NX-SL5700 |
| Safety Input Unit | NX-SIH400, NX-SID800 |
| Safety Output Unit | NX-SOH200, NX-SOD400 |

I/O Units

| Unit | Model | | | | |
|------------------------|--|--|--|--|---|

System Units

| Unit | Model |
|--------------------------------------|---------------------------------|
| Additional NX Unit Power Supply Unit | NX-PD1000 |
| Additional I/O Power Supply Unit | NX-PF0630, NX-PF0730 |
| I/O Power Supply Connection Unit | NX-PC0010, NX-PC0020, NX-PC0030 |
| Shield Connection Unit | NX-TBX01 |

Communication Control Unit NX-CSG320

| Letter | Name | Function |
|--------|------------------------------------|---|
| (A) | SD Memory Card connector | Connects the SD Memory Card to the Communication Control Unit. |
| (B) | SD Memory Card power supply switch | Turns OFF the power supply so that you can remove the SD Memory Card. |
| (C) | DIN Track mounting hooks | These hooks are used to mount the Unit to a DIN Track. |
| (D) | Terminal Block | Used for wiring the power supply and functional grounding wire. |
| (E) | NX bus connector | This connector is used to connect the Communication Control Unit to the NX Unit on the right of the Communication Control Unit. |
| (F) | IP Address Switch 2 (x16, x1) | Used for setting an IP address for the built-in EtherNet/IP port (PORT2A and PORT2B). Use the rotary switches and specify a two-digit hexadecimal number. |
| (G) | IP Address Switch 1 (x16, x1) | Used for setting an IP address for the built-in EtherNet/IP port (PORT1). Use the rotary switches and specify a two-digit hexadecimal number. |
| (H) | SD Memory Card cover | A cover for the SD Memory Card DIP switch area. It opens in the horizontal direction. |
| (I) | Operation Status Indicators | Show the operation status of Communication Control Unit by multiple indicators. |
| (J) | End Cover | A cover to protect the Communication Control Unit and NX Unit. One End Cover is provided with the Communication Control Unit as a standard accessory. |
| (K) | DIN Track contact plate | This plate is used to contact the functional ground terminal with a DIN Track. |
| (L) | Unit hookup guides | These guides are used to mount NX Units or End Cover. |
| (M) | ID Information Indication | Shows the ID information of the Unit. |
| (N) | DIP Switch | Used for backups. Normally, turn OFF all of the pins. |
| (O) | Built-in EtherNet/IP Port (PORT2) | Connects the built-in EtherNet/IP with an Ethernet cable. PORT2 consists of two RJ45 connectors (PORT2A and PORT2B) and has a built-in Ethernet switch. |
| (P) | Built-in EtherNet/IP Port (PORT1) | Connects the built-in EtherNet/IP with an Ethernet cable. |

Terminal Blocks

| Letter | Name | Function |
|--------|-----------------------------|---|
| (A) | Terminal number indications | The terminal numbers are given by column letters A and B, and row numbers 1 to 8. The combination of the "column" and "row" gives the terminal numbers from A1 to A8 and B1 to B8. The terminal number indicators are the same regardless of the number of terminals on the terminal block, as shown above. |
| (B) | Release hole | Insert a flat-blade screwdriver into these holes to connect or remove the wires. |
| (C) | Terminal hole | The wires are inserted into these holes. |
| (D) | Ground terminal mark | This mark indicates the ground terminals. |

Terminal Blocks come in three types depending on the number of terminals that can be used. There are 8-terminal, 12-terminal, and 16-terminal Terminal Blocks.

Only the 8-terminal type terminal block is compatible with Communication Control Unit.

To prevent incorrect insertion, terminal blocks in any other types besides the 8-terminal type cannot be mounted.

Applicable Terminal Blocks for Each Model

Current capacity of power supply terminals and applicable terminal blocks for each model of Communication Control Unit are shown in the following table.

| Unit model number | Current capacity of power supply terminal for the Unit | | Terminal block | | | |
|-------------------|--|------------------|----------------------|---------------------|----------------------|---------------------------|
| | Unit power supply | I/O power supply | Terminal block model | Number of terminals | Ground terminal mark | Terminal current capacity |
| NX-CSG320 | 4 A | | NX-TBC082 | 8 | Provided | 10 A |

Indicators

| Letter | Name | Function |
|--------|--|---|
| (A) | Model number display | Displays the model information of Communication Control Unit. |
| (B) | Communication Control Unit Status Indicators | The indicators show the current operating status of Communication Control Unit. |
| (C) | Built-in EtherNet/IP Status Indicators (PORT1) | The indicators show the communications status of Built-in EtherNet/IP Port (PORT1). |
| (D) | Built-in EtherNet/IP Status Indicators (PORT2) | The indicators show the communications status of Built-in EtherNet/IP Port (PORT2). |
| (E) | NX Bus Status Indicators | These indicators show the communications status with Communication Control Unit and NX Units. |
| (F) | Power Status Indicators | Show the power supply status of the Unit and I/O power supply. |

Safety Control Units
Safety CPU Units NX-SL5500/SL5700

| Letter | Name | Function |
|--------|-----------------------------------|--|
| (A) | Marker attachment locations | The locations where markers are attached. The markers made by OMRON are installed for the factory setting. Commercially available markers can also be installed. |
| (B) | Protrusions for removing the Unit | The protrusions to hold when removing the Unit. |
| (C) | DIN Track mounting hook | This hook is used to mount the NX Unit to a DIN Track. |
| (D) | NX bus connector | This is the NX-series bus connector. |
| (E) | Unit hookup guides | These guides are used to connect two Units. |
| (F) | Indicators | The indicators show the current operating status and power supply status of the Safety CPU Unit. |
| (G) | Service switch | This switch is used for the start trigger of various functions. |
| (H) | DIP switch | This switch is used for the Safety Unit Restore and the safety data logging function. |
| (I) | Unit specifications | The specifications of the Safety CPU Unit are given. |

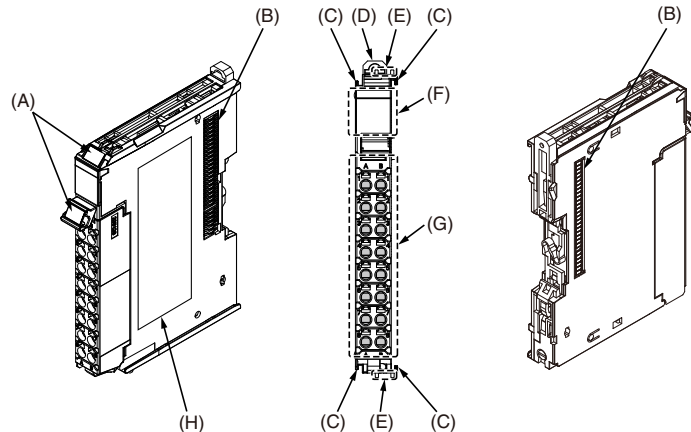

Indicators

The Safety CPU Unit has indicators that show the current operating status and communications status.

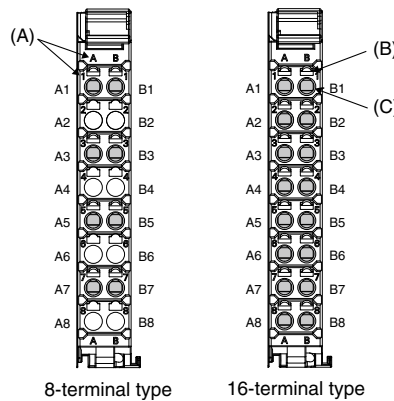

| Letter | Name | Function |
|--------|----------------------|---|
| (A) | Model number display | Displays part of the model number of the Safety CPU Unit. |
| (B) | Indicators | Show the current operating status and communications status of the Safety CPU Unit. |

Safety Input Units NX-SIH400/SID800
Safety Output Units NX-SOH200/SOD400

| Letter | Item | Specification |
|--------|-----------------------------------|--|
| (A) | Marker attachment locations | The locations where markers are attached. The markers made by OMRON are installed for the factory setting. Commercially available markers can also be installed. |
| (B) | NX bus connector | This is the NX-series bus connector. Connect this connector to another Unit, such as the NX-series Safety CPU Unit or a Safety I/O Unit. |
| (C) | Unit hookup guides | These guides are used to connect two Units. |
| (D) | DIN Track mounting hooks | These hooks are used to mount the NX Unit to a DIN Track. |
| (E) | Protrusions for removing the Unit | The protrusions to hold when removing the Unit. |
| (F) | Indicators | The indicators show the current operating status of the NX Unit or signal I/O status. The number of indicators varies depending on the NX Unit. |
| (G) | Terminal block | The terminal block is used to connect to external devices. It connects the safety outputs. The number of terminals depends on the NX Unit. |
| (H) | Unit specifications | The specifications of the NX Unit are given here. |

Terminal Blocks

| Letter | Item | Specification |
|--------|-----------------------------|---|
| (A) | Terminal number indications | The terminal numbers are given by column letters A and B, and row numbers 1 to 8. The combination of the column and row gives the terminal numbers from A1 to A8 and B1 to B8. The terminal number indicators are the same regardless of the number of terminals on the terminal block, as shown above. |
| (B) | Release holes | Insert a flat-blade screwdriver into these holes to connect and remove the wires. |
| (C) | Terminal holes | The wires are inserted into these holes. |

Applicable Terminal Blocks for Each Unit Model

| Unit model number | Terminal Blocks | | | | |
|-------------------|-----------------|------------------|-----------------------------|----------------------|---------------------------|
| | Model | No. of terminals | Terminal number indications | Ground terminal mark | Terminal current capacity |
| NX-SIH400 | NX-TBA082 | 8 | A/B | None | 10 A |
| NX-SID800 | NX-TBA162 | 16 | A/B | None | 10 A |
| NX-SOH200 | NX-TBA082 | 8 | A/B | None | 10 A |
| NX-SOD400 | NX-TBA082 | 8 | A/B | None | 10 A |

Applicable Wires

Using Ferrules

If you use ferrules, attach the twisted wires to them.

Observe the application instructions for your ferrules for the wire stripping length when attaching ferrules.

Always use plated one-pin ferrules. Do not use unplated ferrules or two-pin ferrules.

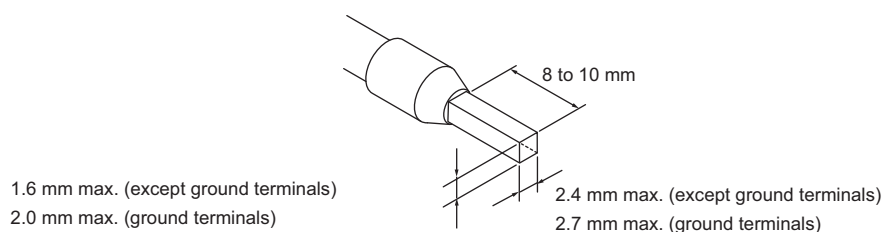

The applicable ferrules, wires, and crimping tool are given in the following table.

| Terminal types | Manufacturer | Ferrule model number | Applicable wire (mm ² (AWG)) | Crimping tool |
|---------------------------------------|-----------------|----------------------|---|--|
| Terminals other than ground terminals | Phoenix Contact | AI0,34-8 | 0.34 (#22) | Phoenix Contact (The figure in parentheses is the applicable wire size.) CRIMPFOX 6 (0.25 to 6 mm ² , AWG24 to 10) |
| | | AI0,5-8 | 0.5 (#20) | |
| | | AI0,5-10 | | |
| | | AI0,75-8 | 0.75 (#18) | |
| | | AI0,75-10 | | |
| | | AI1,0-8 | 1.0 (#18) | |
| | | AI1,0-10 | | |
| | | AI1,5-8 | 1.5 (#16) | |
| AI1,5-10 | | | | |
| Ground terminals | | AI2,5-10 | 2.0 * | |
| Terminals other than ground terminals | Weidmuller | H0.14/12 | 0.14 (#26) | Weidmuller (The figure in parentheses is the applicable wire size.) PZ6 Roto (0.14 to 6 mm ² , AWG 26 to 10) |
| | | H0.25/12 | 0.25 (#24) | |
| | | H0.34/12 | 0.34 (#22) | |
| | | H0.5/14 | 0.5 (#20) | |
| | | H0.5/16 | | |
| | | H0.75/14 | 0.75 (#18) | |
| | | H0.75/16 | | |
| | | H1.0/14 | 1.0 (#18) | |
| | | H1.0/16 | | |
| | | H1.5/14 | 1.5 (#16) | |
| | | H1.5/16 | | |

* Some AWG 14 wires exceed 2.0 mm² and cannot be used in the screwless clamping terminal block.

When you use any ferrules other than those in the above table, crimp them to the twisted wires so that the following processed dimensions are achieved.

Finished Dimensions of Ferrules

Using Twisted Wires/Solid Wires

If you use the twisted wires or the solid wires, use the following table to determine the correct wire specifications.

| Terminals | | Wire type | | | | Wire size | Conductor length (stripping length) |
|--|-------------------------------------|---------------|--------------|--------------|--------------|--|--|
| | | Twisted wires | | Solid wire | | | |
| Classification | Current capacity | Plated | Unplated | Plated | Unplated | | |
| All terminals except ground terminals | 2 A max. | Possible | Possible | Possible | Possible | 0.08 to 1.5 mm ² AWG28 to 16 | 8 to 10 mm |
| | Greater than 2 A and 4 A or less | | Not Possible | Possible *1 | Not Possible | | |
| | Greater than 4 A | Possible *1 | | Not Possible | | | |
| Ground terminals | --- | Possible | Possible | Possible *2 | Possible *2 | 2.0 mm ² | 9 to 10 mm |

*1 Secure wires to the screwless clamping terminal block. Refer to the *Securing Wires* in the USER'S MANUAL (Cat. No. Z395) for how to secure wires.

*2 With the NX-TB□□□1 Terminal Block, use twisted wires to connect the ground terminal. Do not use a solid wire.

Conductor length (stripping length)

<Additional Information> If more than 2 A will flow on the wires, use plated wires or use ferrules.

Selecting the Network Devices

Recommended Ethernet Switches

We recommend products that have passed the ODVA's conformance tests for Managed Ethernet Switch Device Profile.

Recommended Twisted-pair Cables and Connectors

Applicable EtherNet/IP communications cables and connectors vary depending on the used baud rate.

For 100Base-TX and 10Base-T, use an STP (shielded twisted-pair) cable of category 5 or higher.

You can use either a straight or cross cable.

Cabling materials used for EtherNet/IP communication cables are shown in the table below.

100Base-TX in the Product name column of the table below indicates that either 100Base-TX or 10Base-T can be used.

| Product name | | | Manufacturer | Model |
|-------------------------------|--|---|------------------------------------|-----------------------------|
| For 1000Base-T and 100Base-TX | Size and conductor pairs: AWG 24 × 4 pairs * | Cables | Hitachi Metals, Ltd. | NETSTAR-C5E SAB 0.5 × 4P CP |
| | | | Kuramo Electric Co., Ltd. | KETH-SB |
| | | | SWCC Showa Cable Systems Co., Ltd. | FAE-5004 |
| | | RJ45 Connectors | Panduit Corporation | MPS588-C |
| For 100Base-TX | Size and conductor pairs: AWG 22 × 2 pairs * | Cables | Kuramo Electric Co., Ltd. | KETH-PSB-OMR |
| | | | JMACS Japan Co., Ltd. | PNET/B |
| | | RJ45 Assembly Connectors  | OMRON | XS6G-T421-1 |

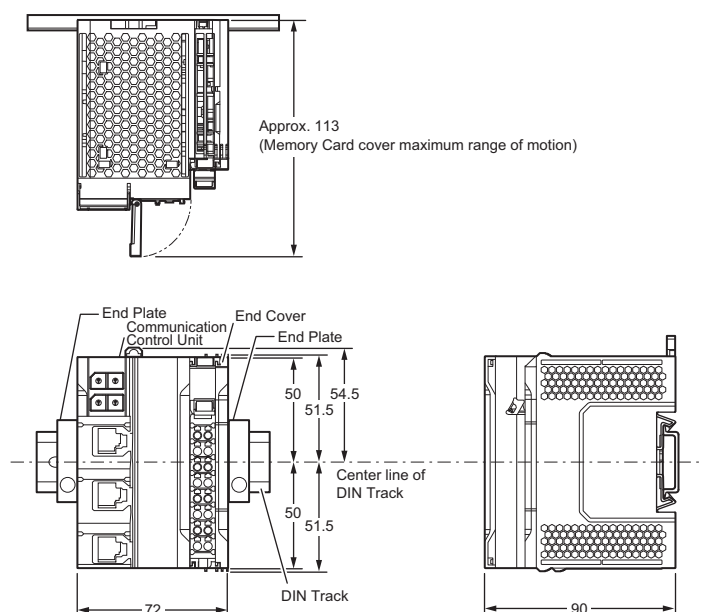

* We recommend that you use cables and connectors in above combinations.

Dimensions

(Unit: mm)

Communication Control Unit

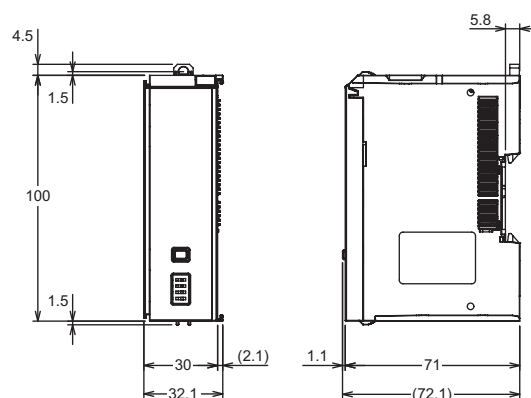

NX-CSG320

Note: For dimensions with the communications cable connected, refer to *NX-series User's Manual Safety Control Unit/Communication Control Unit* (Cat. No.Z395)

Safety Control Units

Safety CPU Units NX-SL5500/SL5700

Safety Input Units NX-SIH400/SID800

Safety Output Units NX-SOH200/SOD400

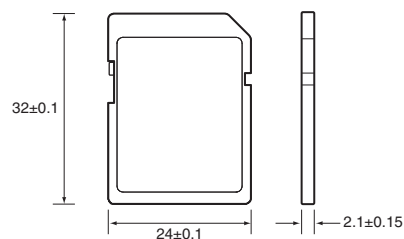

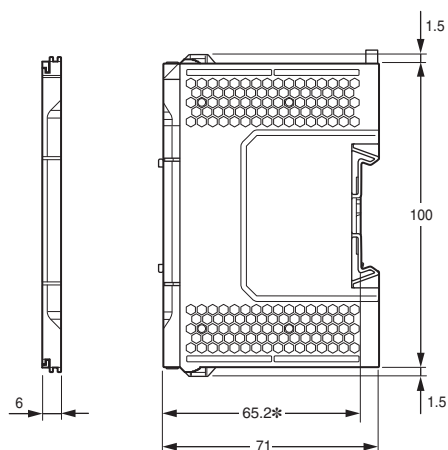

*1. The dimension is 1.35 mm for Units with lot numbers through December 2014.

*2. The dimension from the attachment surface of the DIN Track to the front surface of the Safety I/O Unit.

End Cover NX-END02

SD Memory Card HMC-SD291/SD491

* The dimension from the attachment surface of the DIN Track to the front surface of the end cover.

Safety I/O Terminal GI-S Series

GI-SMD/SID

Safety I/O Terminals for CIP Safety™

- Support for CIP Safety on EtherNet/IP
- Standard-feature EtherNet/IP port
- Easy programming with Sysmac Studio

For the most recent information on models that have been certified for safety standards, refer to your local Omron website.

Features

- Memory cassette for quick replacement of terminal
- Removable terminal block for easy maintenance
- Push-In Plus (screwless clamping) terminal block

Quick replacement of terminal

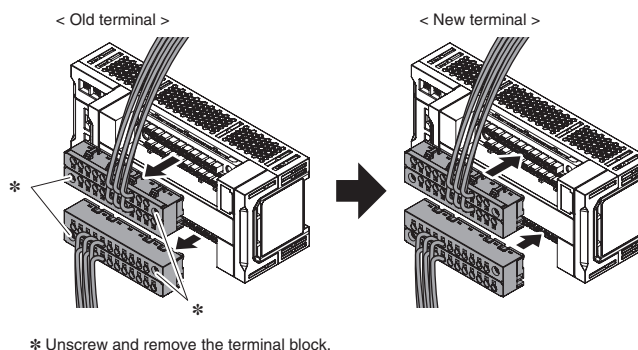

■ Memory cassette for quick replacement of terminal

Remove the memory cassette from the old terminal and install it into the new one to inherit the settings. No software is required.

■ Removable terminal block

Remove the wired terminal block from the old terminal and install it into the new one. No re-wiring is required.

Ordering Information

GI-S-series safety I/O terminals **NEW**

| Specification | | | I/O capacity | | | Unit version | Model |
|--------------------------------------|----------------------|--------------------|---------------|--------------|--------------------------|--------------|------------|
| Corresponding communication protocol | Number of connectors | Number of networks | Safety inputs | Test outputs | Safety outputs (for PNP) | | |
| EtherNet/IP | 2 | 1 * | 12 inputs | 12 outputs | 4 outputs | Ver. 1.0 | GI-SMD1624 |
| | | | 12 inputs | 12 outputs | --- | Ver. 1.0 | GI-SID1224 |

* PORT1 and PORT2 are ports with switching hub.

Accessories

Not included.

- Sysmac and SYSMAC are trademarks or registered trademarks of OMRON Corporation in Japan and other countries for OMRON factory automation products.
- Microsoft, Windows, Windows Vista, Excel, and Visual Basic are either registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.
- ODVA, CIP™, CompoNet™, DeviceNet™, EtherNet/IP™, and CIP Safety™ are trademarks of ODVA.
- The SD and SDHC logos are trademarks of SD-3C, LLC.

Other company names and product names in this document are the trademarks or registered trademarks of their respective companies.

Specifications

Regulations and Standards

GI-S-series safety I/O terminals

| Certification body | Standards |
|--------------------|---|
| TÜV Rheinland | <ul style="list-style-type: none"> • EN ISO 13849-1 • IEC 61508 parts 1-7 • IEC/EN 62061 • IEC/EN 61131-2 |
| UL | <ul style="list-style-type: none"> • NRAG (UL 61010-1, UL 61010-2-201 and UL 121201) • NRAG7 (CSA C22.2 No. 61010-1, CSA C22.2 No. 61010-2-201 and CSA C22.2 No. 213) |

- The FSoE protocol was certified for applications in which OMRON FSoE devices are connected to each other. For compatibility with FSoE devices other than OMRON FSoE devices, the customer must validate FSoE communications.

By using GI-S-series safety I/O terminals, you can build a safety control system that meets the followings.

- Requirements for SIL 3 (Safety Integrity Level 3) in IEC 61508, IEC/EN 62061, (Functional Safety of Electrical/Electronic/Programmable Electronic Safety-related Systems)
- Requirements for PL_e (Performance Level e) and for safety category 4 in EN ISO13849-1

Also, GI-S-series safety I/O terminals have been registered for conformity to RCM, EAC, and KC (Korean radio regulation).

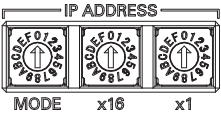

General Specifications

| Item | | Specification |
|------------------------------|--------------------------------------|--|
| Enclosure | | Mounted in a panel (open type) |
| Operating environment | Ambient operating temperature | 0 to 55°C |
| | Ambient operating humidity | 10% to 95% (with no condensation or icing) |
| | Atmosphere | Must be free from corrosive gases |
| | Ambient storage temperature | –25 to 70°C (with no condensation or icing) |
| | Altitude | 2,000 m max. |
| | Pollution degree | 2 |
| | Insulation class | CLASS III (SELV) |
| | Overvoltage category | II |
| | EMC immunity level | Zone B: IEC 61131-2 |
| | Vibration resistance | Conforms to IEC 60068-2-6 5 to 8.4 Hz with amplitude of 3.5 mm 8.4 to 150 Hz, acceleration of 9.8 m/s ² 100 min. in each X, Y, and Z directions (10 sweeps of 10 min. each = 100 min. total) |
| | Shock resistance | Conforms to IEC 60068-2-27 147 m/s ² 3 times in each X, Y, and Z directions |
| | Insulation resistance | 20 MΩ between isolated circuits (at 100 VDC) |
| | Dielectric strength | 500 VAC between isolated circuits for 1 minute at a leakage current of 10 mA max. |
| Installation method | | DIN Track mounting (IEC 60715 TH35-7.5/TH35-15) |
| Degree of protection | | IP20 |

*1. OMRON special safety input devices are the following input devices:

- Safety mat UMA, UM (The UM Series was discontinued at the end of June 2019.)
- Safety edge SGE
- Single-beam safety sensor E3ZS
- Non-contact door switch D40A, D40Z

*2. GI-SID1224 has no output signal terminal and no output power supply is connected.

*3. Projections are not included.

*4. Inrush current when the supply power is turned ON from the static power-OFF state. Inrush current value may vary depending on conditions. For your selection of fuses, breakers, and external power supply units, take into account the conditions to be used to select those that have a margin in characteristics and capacity.

*5. Current-carrying capacity allowed to continuously flow through the terminal. This current must not be exceeded in case crossover wiring is done for the unit power supply.

GI-SMD/SID

Built-in EtherNet/IP port specifications

This section describes the field bus specifications of the safety I/O terminal.

| Item | | | Specifications |
|---|-----------------------|--------|--|
| | | | GI-SMD1624 / GI-SID1224 |
| Communications protocol | | | TCP/IP, UDP/IP |
| Support services | | | Sysmac Studio connection, tag data links, CIP message communication, DHCP (client) |
| Number of logical ports | | | 1 |
| Physical layer | | | 100BASE-TX |
| Transmission specifications | Media access method | | CSMA/CD |
| | Modulation | | Baseband |
| | Transmission path | | Star, daisy chain, mixed (star and daisy chain), ring (DLR) |
| | Transmission rate | | 100M bit/s (100BASE-TX) |
| | Transmission media | | Twisted-pair cable (shielded: STP): category 5/5e or higher |
| | Transmission distance | | 100m max. (distance between hub and node) |
| Number of cascaded connections | | | 50 nodes or less recommended |
| CIP messaging service: Explicit message UCMM (non-connection type) | | | Maximum number of clients that can communicate simultaneously: 8/Logical ports |
| Safety process data communications | Exclusive Owner (EO) | Input | 1 |
| | | Output | 1 |
| Standard process data communications | Input Only | | 1 (Point to Point) |
| | Listen Only | | 7 (Multi-Cast) |
| EtherNet/IP conformance test | | | CT9 compliant |
| Ethernet interface | | | 100BASE-TX Auto Negotiation Auto-MDI |
| DLR (Device Level Ring) | | | Ring Node (Beacon-based) |

Version Information

This section describes the combinations that can be used of the unit versions of the Safety CPU Unit and the Communication Control Unit, Machine Automation Controller, and the version of the Sysmac Studio.

| Safety I/O Terminal | | Supported Version | | | | | |
|---------------------|--------------|---|--|---|-------------------|-------------------------|---|
| Model | Unit Version | Safety CPU Unit NX-SL5700 NX-SL5500 | Communication Control Unit NX-CSG320 | Machine Automation Controller NX102-□□□□ | Sysmac Studio | Network Configurator | Network Configurator for DeviceNet Safety |
| GI-SMD1624 | Ver.1.0 | Ver.1.3 | Ver.1.01 | Ver.1.31 | Ver.1.24 or later | Ver.3.67 or later | Ver.3.42 or later |
| GI-SID1224 | Ver.1.0 | Ver.1.3 | Ver.1.01 | Ver.1.31 | Ver.1.24 or later | Ver.3.67 or later | Ver.3.42 or later |

Component and Functions

This section describes the names and functions of the parts of the safety I/O terminal.

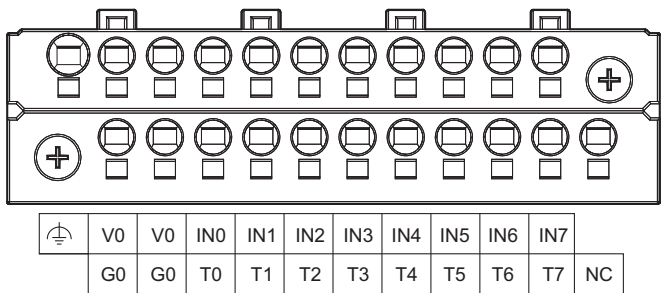

| Symbol | Name | Description |
|--------|-----------------------------------|---|
| A | Rotary switch | Used to set the mode switching and IP address of the built-in EtherNet/IP ports (PORT1/PORT2), in hexadecimal expression. |
| B | LED indicator | Shows the operation, signal, power supply and statuses of the safety I/O terminal itself by LED. |
| C | Top terminal block | Terminal block to connect unit power supply, grounding, and input devices. |
| D | Memory cassette slot | A memory cassette is set on delivery. The memory cassette allows a user to inherit the settings when replacing GI-S-series. |
| E | Built-in EtherNet/IP port (PORT1) | Connects the built-in EtherNet/IP with an Ethernet cable. |
| F | Built-in EtherNet/IP port (PORT2) | Connects the built-in EtherNet/IP with an Ethernet cable. |
| G | Bottom terminal block | Terminal block to connect output power supply and input/output devices. * |
| H | Unit specifications | Shows the product information, standards marking, and ID information (lot number/unit version) of the safety I/O terminal. |
| I | DIN Track mounting hooks | These hooks are used to mount the Unit to a DIN Track. |
| J | ID information indication | Shows the ID information (MAC address) of the safety I/O terminal. |

* Connection of output device is for GI-SMD1624 only.

Wiring

Terminal arrangement

Top terminal block

| Symbol | Terminal name | Description |
|-----------|----------------------------|---|
| | Functional grounding | Functional grounding terminal to connect the grounding wire. |
| V0, G0 | Unit power supply terminal | Terminal to connect the safety I/O terminal's power supply and to supply power to external devices. Power supply 24VDC is connected to V0 and 0VDC to G0, respectively. V0 and G0 terminals are internally connected. |
| IN0 - IN7 | Input terminal | Terminal to connect a safety input device. |
| T0 - T7 | Test output terminal | Terminal for test output. |

Bottom terminal block

Arrangement differs for safety I/O terminal models.

a) GI-SMD1624

| Symbol | Terminal name | Description |
|-------------|------------------------------|---|
| V1, G1 | Output power supply terminal | Terminal to supply power to internal output control circuit and external devices. V1 and G1 terminals are internally connected. |
| OUT0 - OUT3 | Output terminal | Terminal to connect a safety output device. |
| IN8 - IN11 | Input terminal | Terminal to connect a safety input device. |
| T8 - T11 | Test output terminal | Terminal for test output. |

b) GI-SID1224

The terminal block form is same as a).

| Symbol | Terminal name | Description |
|------------|------------------------------|--|
| V1, G1 | Output power supply terminal | V1 and G1 terminals are internally connected. GI-SID1224 is not connected to an output device and must not be wired. |
| NC | NC | Do not connect. |
| IN8 - IN11 | Input terminal | Terminal to connect a safety input device. |
| T8 - T11 | Test output terminal | Terminal for test output. |
