

NS Series

The HMI you can rely on

» Proven Reliability

» Best Match

» Machine Management

Machine Control at your fingertips

Expanding markets in emerging countries, short product cycles, and diversifying customer needs are just some of the factors that create drastic changes for the production industry.

To win in severe global market competition, you have to continue to grasp industry changes quickly, understand user needs accurately, and provide diverse forms of added value.

Omron will help you handle ever-changing customer needs with the three keywords of the NS Series.

Let your machines evolve

Best match

Omron has provided even greater compatibility with Omron PLCs and components to provide an advanced design process that lets you achieve appealing machines.

Machine management

The NS Series transforms machine HMIs from simple operation panels and turns them into machine management tools.

Proven reliability

The NS-series HMIs have a proven track record that will take your machines to a higher level of reliability.

NS Series

The best match possible

The amount of work and cost of connecting to Omron PLCs and components have been greatly reduced. The results is an incredible range of features that is possible only when unifying to one manufacturer. Connecting to the NJ-series Machine Automation Controller allows the machine designer to quickly achieve the features required by the user through support for improved troubleshooting and structured programming with structures and other new data types.

Machine management tool

The machine designer can easily implement PLC troubleshooting, machine troubleshooting, settings for servo drives, temperature controllers, and other control components, status monitoring of connected devices, and uploading/downloading of parameters.

Proven reliability

In the ten years since initial marketing, Omron has globally supplied numerous HMI solutions with the highly reliable NS Series at over 200 sales and service centers around the world.

NS Series Line-up

Standard Models

Software**CX-Designer**

The software for project creation on the NS series, the CX-Designer Screen Design Software is so easy-to-use that anyone can master it. CX-Designer is included in CX-One and Sysmac Studio.

**NS-Runtime**

This software enables PLC communications to a personal computer by HMI created screens using CX-Designer.

You can create a flexible, high-speed, high-precision system based on the NJ-series Machine Automation Controllers. Use tags to access any memory areas, or troubleshoot machines and systems by using the NS-series HMIs to make the most of the strengths of the NJ-series Controllers and to manage machines.

The CS/CJ-series PLCs for the reliability of a proven track record

Features are provided to easily connect to CS/CJ-series PLCs to take advantage of their proven track record. Many features that do not require screen creation or programming support everything from design through maintenance to take advantage of the compatibility of Omron PLCs and HMI and to serve as the face of your machines.

CS/CJ

Design

From conceptual designs through commissioning, operation, and maintenance, the NS Series supports every user need.

Troubleshooter

A Troubleshooter is provided for the connected Omron controller or PLC. This greatly reduces work requirements.

NJ Troubleshooter

Controller errors

Standard feature for NJ-series controllers

Errors are automatically detected and displayed on-screen along with corrective actions for the CPU unit, function modules, EtherCAT slaves, and CJ-series units that are connected in the NJ-series controller. Whenever an error might occur, you can recover normal operation quickly to reduce downtime without using user manuals, or support software on a computer.

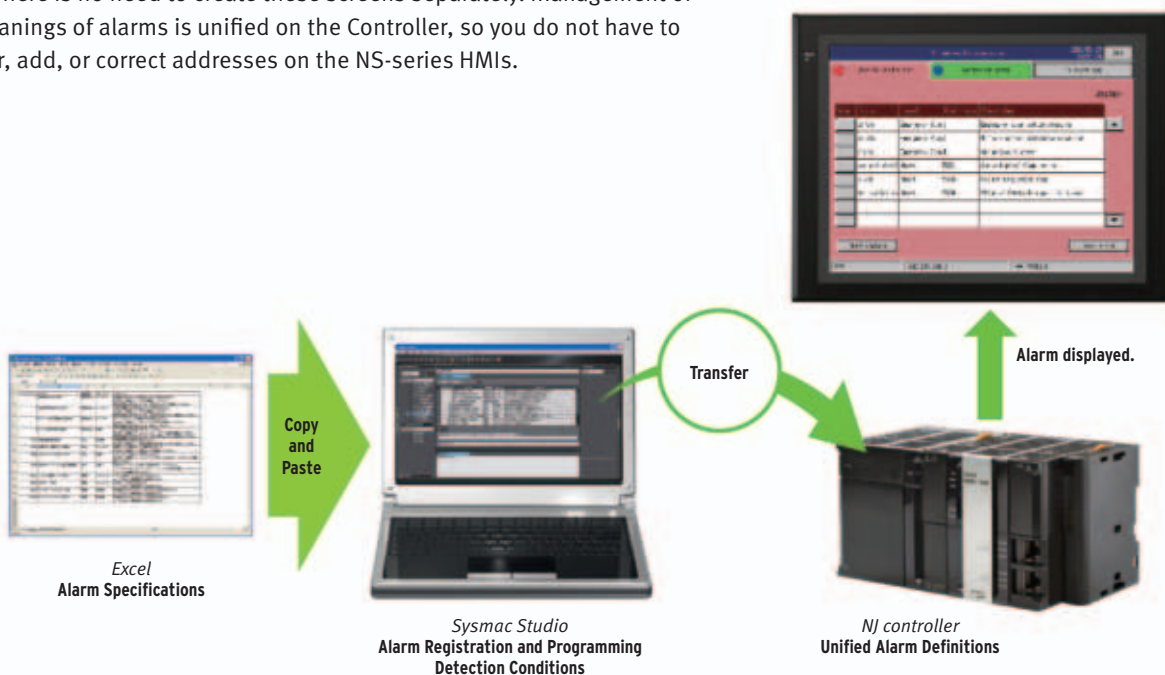

NJ controller

User-defined errors

No Work Is Required to Create Alarm Screens.

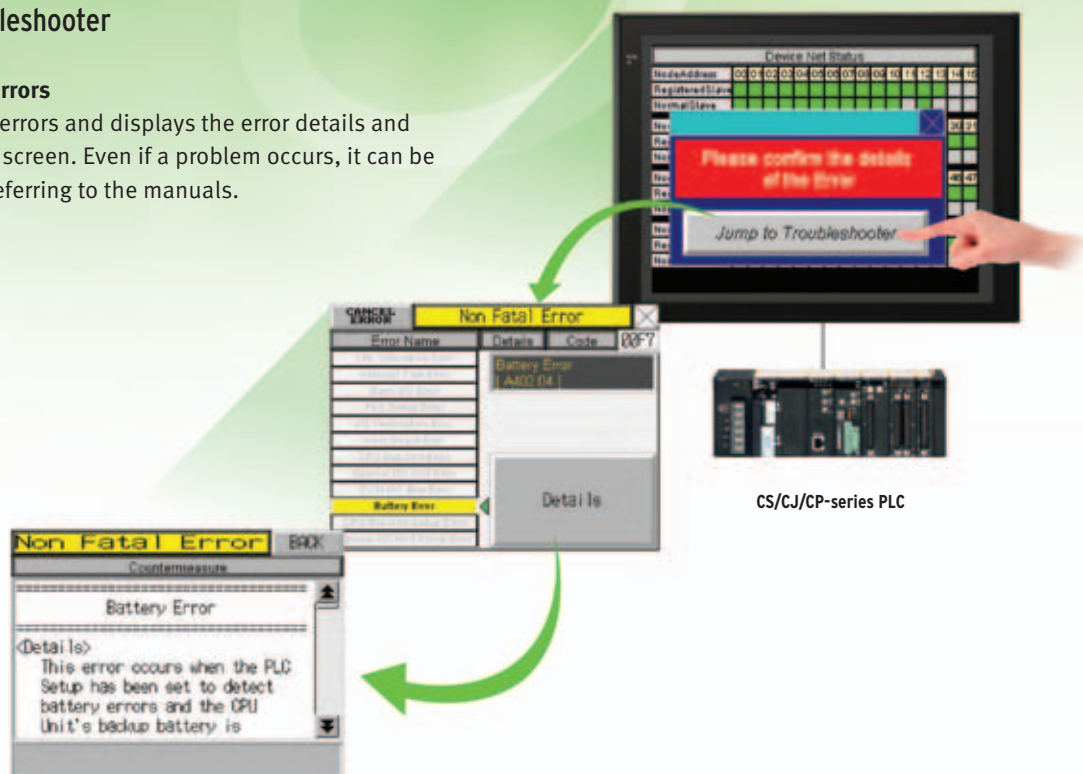

Frames for alarm screens are provided as standard features in the NS-series HMIs. There is no need to create these screens separately. Management of the meanings of alarms is unified on the Controller, so you do not have to register, add, or correct addresses on the NS-series HMIs.

CS/CJ-series PLC Troubleshooter

Constantly monitors PLC errors

Automatically detects PLC errors and displays the error details and recovery procedure on the screen. Even if a problem occurs, it can be resolved quickly without referring to the manuals.

Machine Troubleshooter

Easier design of machine error screens

Individual error screens that were previously made for each error can now be integrated into one. It is possible to switch only the error details (text and screen) without ladder programming in conjunction with the alarm bit.

Specific example

in conjunction with an alarm bit

Alarm bit 10.01 ON
(no paper)

Alarm bit 10.02 ON
(printing error)

Best Match

NS Series is the most suitable HMI for the system that comprises Omron components. The advantage is the compatibility (reducing programming and screen data creation work), which will reduce the amount of designing work.

No Screen Designing / No Programming

NS

Temperature Controllers

Servomotor Servo Driver

Smart Active Parts (SAP Library)

Significantly reduces the effort required to create ladder programming and screens. More than 3,000 library parts (Smart Active Parts) are available, which can directly access Omron PLCs and components. The objects can just be pasted from the Smart Active Parts (SAP Library) to the screen; it is completely unnecessary to create screens and ladder programming.

SAP Library, Temperature Controller Parts

CX-Designer Screen Design Software

The temperature controller's setting and monitor screens are completed in no time.

Example screens using support tool objects (Tool Function SAP Library)

Support tool objects can be incorporated to check for errors and make settings, even without a computer.

Plenty of support tool objects (the Tool Function SAP Library) are available, which can easily be incorporated into support tool functions in the NS-series HMI. Just paste the support tool objects in the screen to check for errors and make settings, even without a computer.

Computer support tools

FROM

PLC CPU unit monitoring screen

NCU unit setting screen

DeviceNet monitoring screen

TO

CPU Bus unit and special I/O unit troubleshooting can also be performed with the SAP Library.

A Troubleshooter SAP Library is available to troubleshoot each Unit in the PLC. When an error occurs in a Unit, the Troubleshooter SAP Library provides an easy-to-understand explanation of the cause of the error as well as the countermeasures.

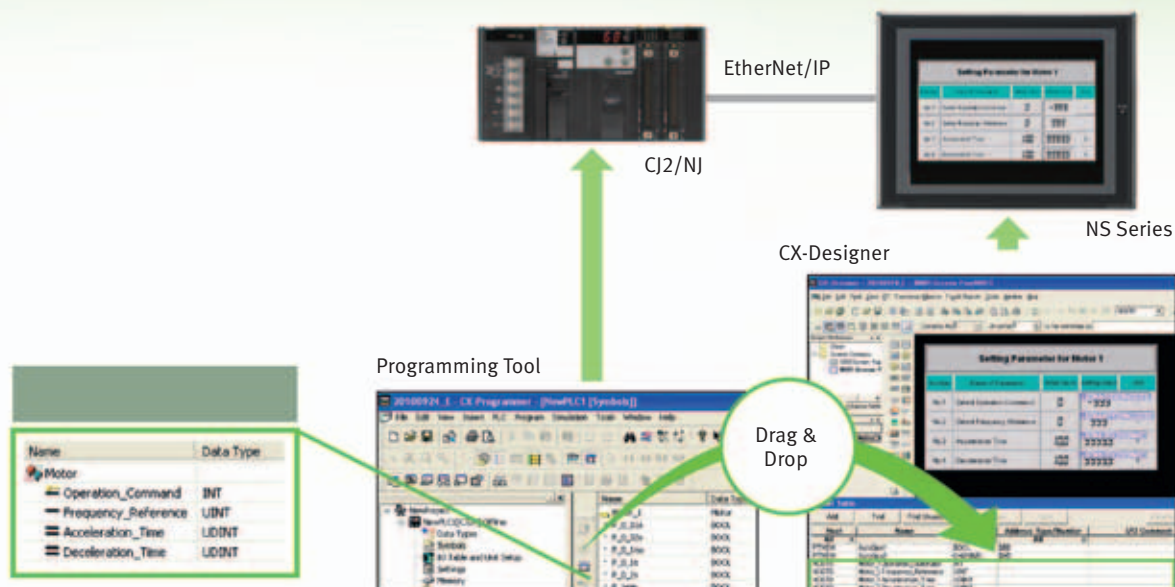

Troubleshooter SAP for Basic I/O unit

Troubleshooter SAP for a Position Control unit

EtherNet/IP

Support for data structures This special feature is made possible by combining an Omron CJ2 PLC with an NS-series HMI. The data structures that you define on the Programming Tool can be used on the CX-Designer simply by dragging and dropping them.

Tag access

A tag is a name given to an address. Tags are managed in the CJ2 CPU Unit, where they are defined as network symbols. The common user-defined tag names are used from programmable terminals and host applications to access memory in a CJ2 CPU Unit without knowing the physical address.

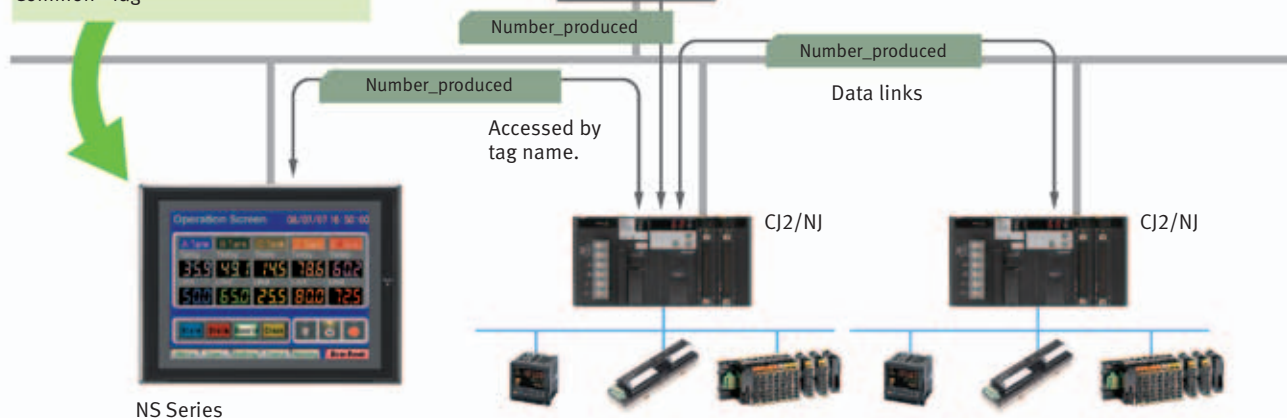

1. Tag names are managed at the PLC with the CX-Programmer.

2. For example, create screens with tag names without typing the physical address.

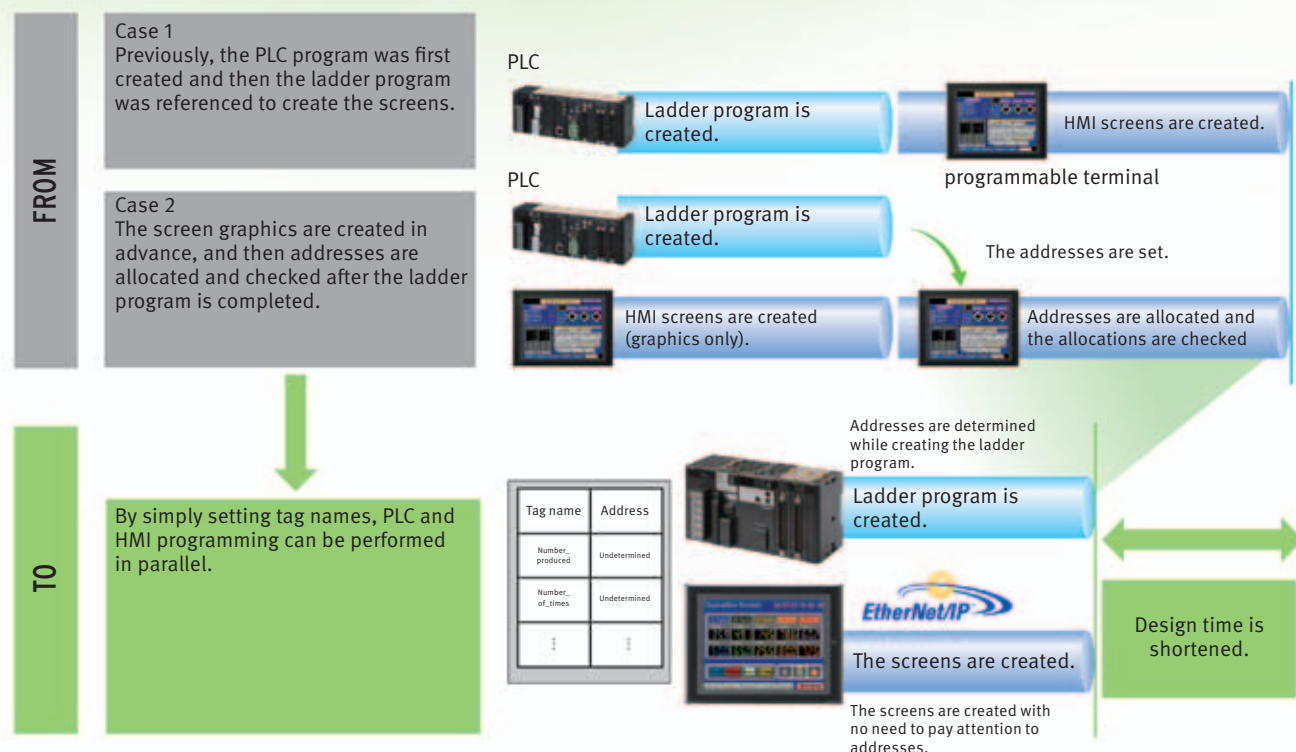

3. All devices will access with Common "Tag"

NS Series

Simultaneous and parallel engineering

The host applications can be designed using the tag names of the PLC and HMI. Parallel development will shorten the design time.

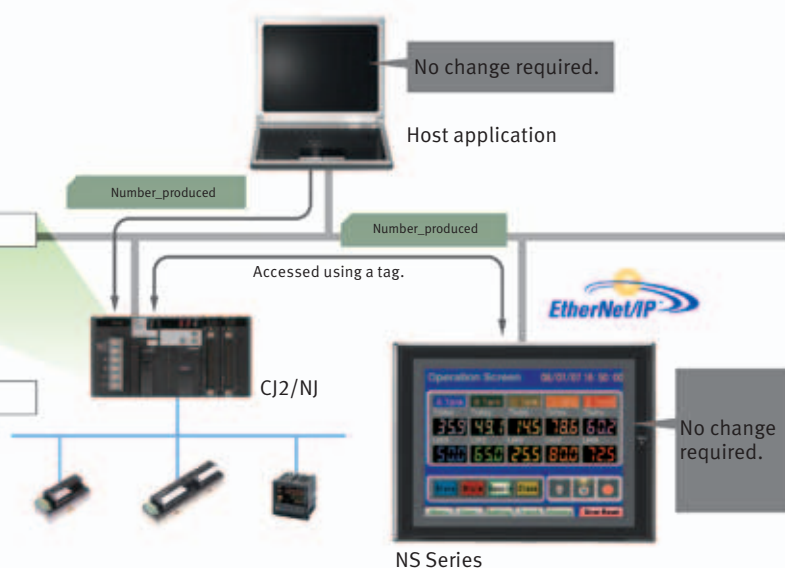

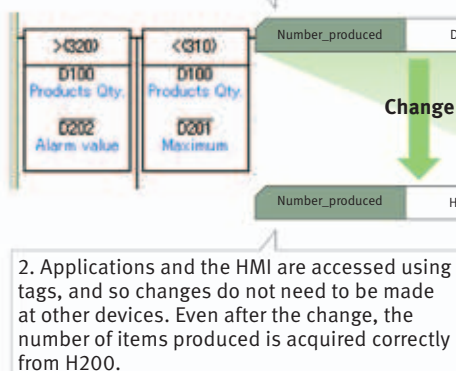

Minimize side effect of address changes

It is possible to access memory with tags, so the HMI and host application are not affected even if the address of data in the PLC is changed.

Specific example

1. With the CX-Programmer, the address for the tag named "Number_produced" is changed from D100 to H200.

Direct Connection to temperature controllers

Connect Omron temperature controllers directly to the NS-series HMI.

Omron Temperature Controllers can be connected directly to the NS-series HMI's RS-422A. Data does not pass through the PLC, so ladder programming is not required. Also, there are plenty of objects in the SAP Library for temperature controllers, and temperature controller screens can be created easily just by pasting objects from the SAP library to the screens.

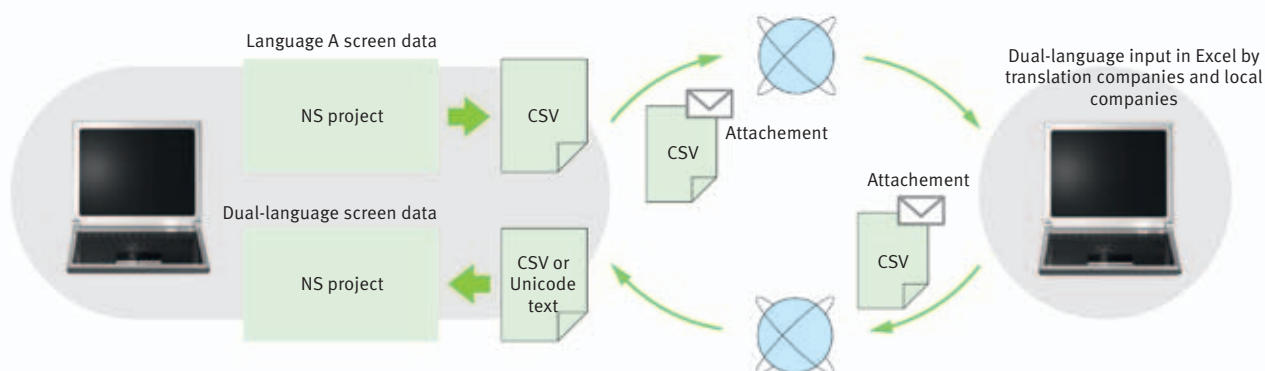

Multi-language Support

Support 42 languages and switch the language of the labels among up to 16 languages.

Unicode is supported and 42 Asian and European languages can be combined in screens. Also, it is possible to switch between up to 16 labels using the label switching function, so it is possible to support up to 16 languages in a single screen just by specifying the language to be displayed in each label.

Multi-language conversion is easy.

The screen data in the source language is exported to a CSV file and sent to a translation agency by e-mail for translation. Later, the translated CSV file is just imported to easily provide multi-language support.

Data logger

Log large amounts of data using a personal computer. Data can be logged through background processing, with up to 160,000 points stored in one file. The logged data is stored in CSV format, and data can be displayed on data log graphs.

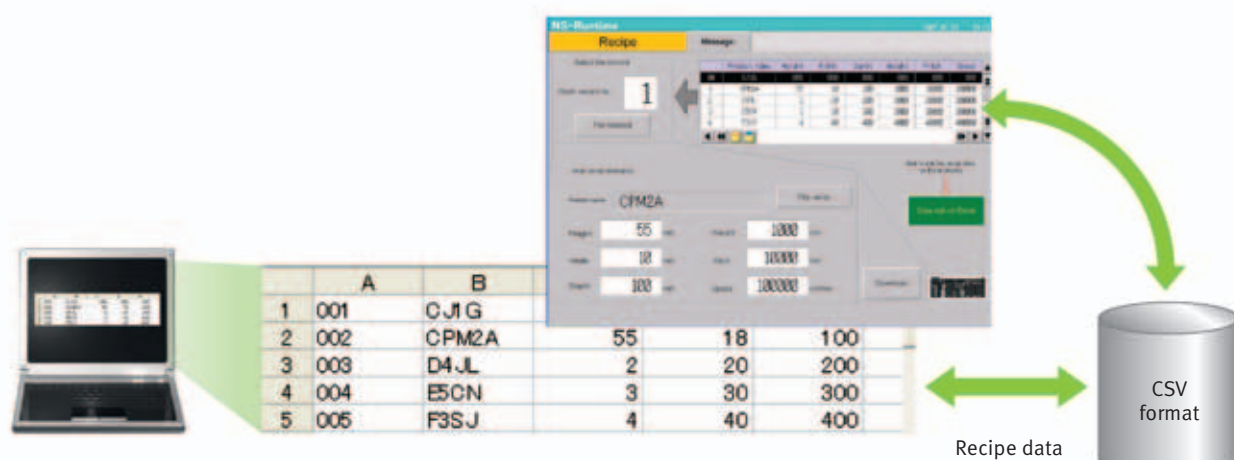

Example: 160,000 Points

Data can be logged for approximately 7.4 days, assuming data is logged every two seconds for 12 hours a day. By using automatic file saving, data logging can be continued even longer than 7.4 days.

Recipe handling

Checking machine data or switching processes from a host computer is easy. Parameter groups in the PLC can be transferred together to a computer, and the transferred data can be checked and edited in CSV format, e.g., using Excel. The edited data can then be transferred together back to the PLC.

Screen data security functions

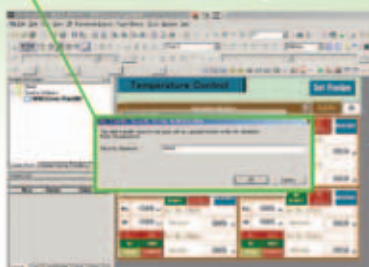

Protect important screen data with a password.

If password protection is set in the data transfer security settings when the screen data is designed, a password must be entered to download or upload the screen data, so important screen data can be protected.

If a password has been set, the password is required to transfer screen data (download or upload) with the Memory Card.

Security password

A password between 4 and 64 characters long can be set. The download/upload will start if the user inputs the password that was set when the screen was designed. (Password input will be disabled if the wrong password is input 3 times in a row.)

Device data transfer

Easy Data Exchange between the PLC and Components

For example, temperature controller alarm values can be transferred to the DM Area of the PLC's CPU unit. No communications programming or macros are required.

Multi-vendor support

Devices from multiple vendors are supported. Data can be easily exchanged with PLCs from other companies and Modbus devices.

Multi-vendor support

Easy settings

CX-Designer select device data transfer setting from the HMI menu.

Make the settings simply by specifying the addresses of the transfer source and transfer destination as well as the number of data items.

Multi function

Execute up to 32 functions with one multifunction object.

Multifunction objects combine the functions of multiple objects into one object. Multiple functions can be executed by pressing one button without using troublesome macros. Setup is easy. For example, a setting can be made on-screen using the support software to turn ON a bit to start a machine, set a value and then change the screen.

Multifunction execution with one object

Integration

Easy On-screen Setup with Support Software!

Execute multiple functions with one button.

Multifunction objects support four useful functions

Switches that do not immediately operate when touched can be easily made without ladder programming.

Versatile Graphs

Data Log Graph (Trend Graph)

Up to 128 data can be collected in the cycle of 500ms. Logging data is stored as a CSV file in the memory card inserted in the NS-series HMI.

Logging data is stored as a CSV file in the Memory Card mounted in the NS-series HMI. The data stored in the memory card can be read or deleted from the screen.

The log data files in the memory card appear as shown below when the read file button is pressed.

Show the current logging graph		
Trd00004.csv	04/06/23	21:16
Trd00003.csv	04/06/23	21:15
Trd00002.csv	04/06/23	21:14
Trd00001.csv	04/06/23	21:13

Suffixes are automatically added to file names set in the CX-Designer.

A log can be saved automatically, without any programming, just by selecting the Save the data periodically option in the data log setting window.

LOG001.CSV	04/06/04	10:00
LOG002.CSV	04/06/05	10:00
LOG003.CSV	04/06/06	10:00
LOG004.CSV	04/06/07	10:00
LOG005.CSV	04/06/08	10:00
LOG006.CSV	04/06/09	10:00
LOG007.CSV	04/06/10	10:00

Logging data for each day (43,200 points) is saved in the memory card in CSV format.

It is possible to make a one-week log by automatically saving the data seven times.

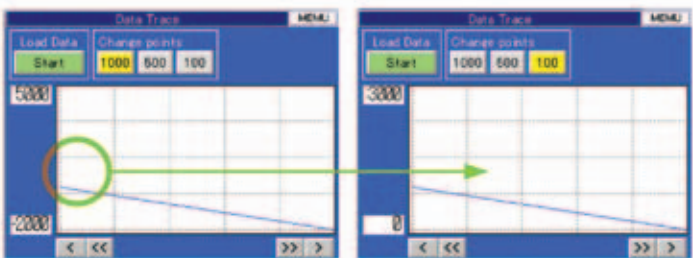

Line graph function

The data logged by the PLC can be displayed in overlapping graphs, so a device's operation can be compared for evaluation and analysis. In addition, up to 1,000 words of consecutive data can be displayed as a line graph, data can be displayed together and any region can be magnified.

(1) Graphs can be superimposed.

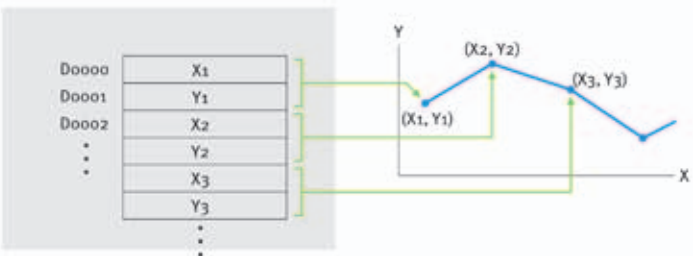

(2) The display can be magnified.

Continuous line function

Any position from the host (PLC) can be plotted as a graph. A graph can be plotted in any position by specifying the X and Y coordinates of the vertices. Also, the graph can be moved on the screen by specifying the movements from the PLC.

Good looking screens and objects

“Cool” screen templates

Professionally designed screen templates are provided. There are seven different types of attractive screen templates for different themes. Simply select the best template from the library.

“Cool” objects

Backgrounds, buttons, labels, message boxes, and other objects are also provided for various themes.

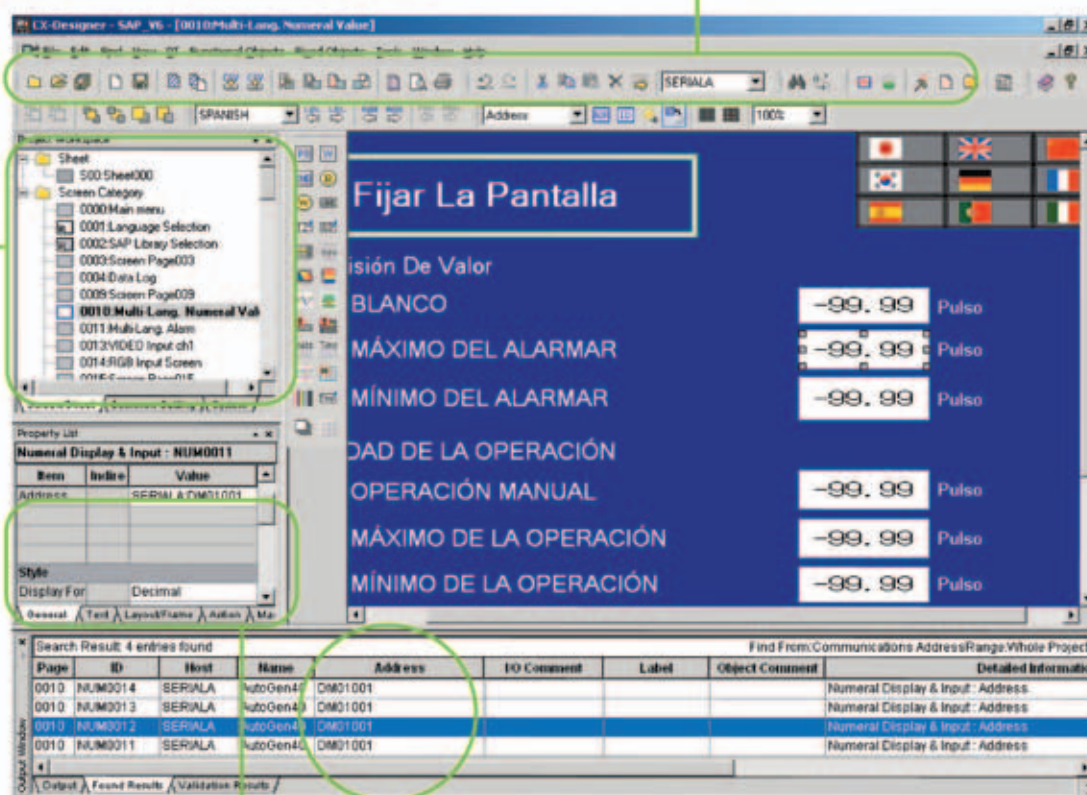

User-friendly screen creation

All addresses and comments can be managed using a single Symbol Table.

Host	First	First Unread Symbol	Host	First	First Unread Symbol	Host	First	First Unread Symbol
Host	Name	Type	Address	Type/Number	S/O	Comment	Type	All
HOST1	STOP	BOOL				STOP SWITCH	Network Variable	
HOST2	PLN	BOOL				PLN SWITCH	Network Variable	
HOST3	AutoSend	CHANNEL	00000					
HOST4	PLN	BOOL				PLN SWITCH	Network Variable	
HOST5	RIGHT	BOOL	0000130			RIGHT SWITCH	Network Variable	
HOST6	AUTO	BOOL	00000000			AUTO SWITCH	Network Variable	
HOST7	PLN	BOOL	00000130			PLN SWITCH	Network Variable	
HOST8	AutoSend	CHANNEL	000					

Improved Icons and Help

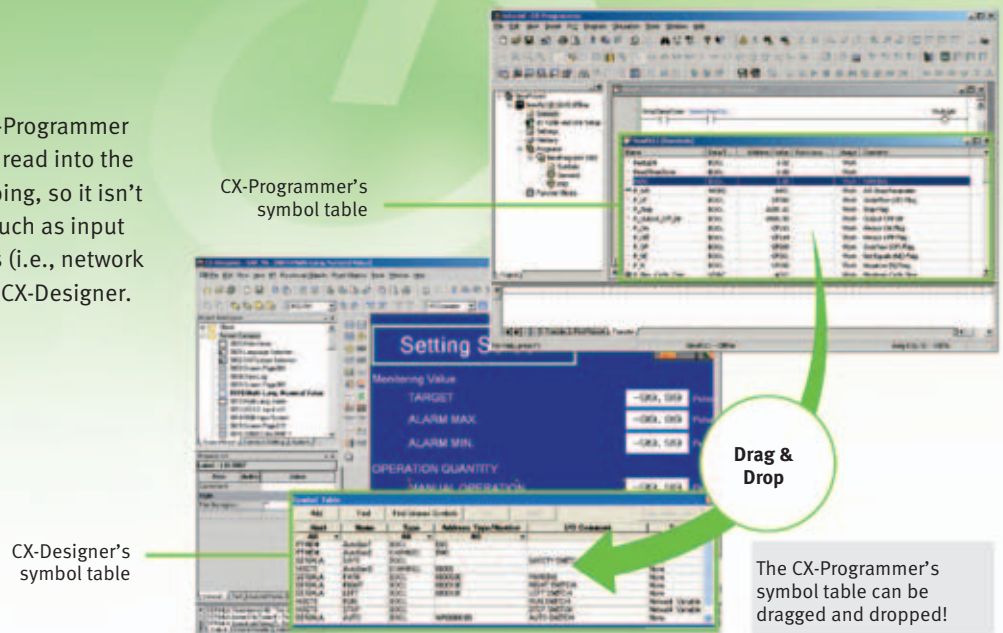

- Screens you want to edit can be opened right away.
- Perform screen management, such as copying or deleting screens, by simply right-clicking.
- Reusing screens from other projects is easy with the CX-Designer.
- Settings for alarms, data logs, communications, and other functions can be easily accessed.

Just click on the object once to display or change properties. Multiple objects can be selected to display and change shared properties all at once.

In addition to addresses and I/O comments used in screen data, labels can also be used as search strings and the results can be displayed.

Reading the symbol table

The symbol table created in the CX-Programmer during ladder programming can be read into the CX-Designer by dragging and dropping, so it isn't necessary to manually enter data such as input addresses and I/O comments. Tags (i.e., network symbols) can also be read into the CX-Designer.

Example of Reading the Symbol Table

The symbol table read from the CX-Programmer can be directly dragged and dropped to the touch switch and lamp.

(1) Create a switch on the screen.

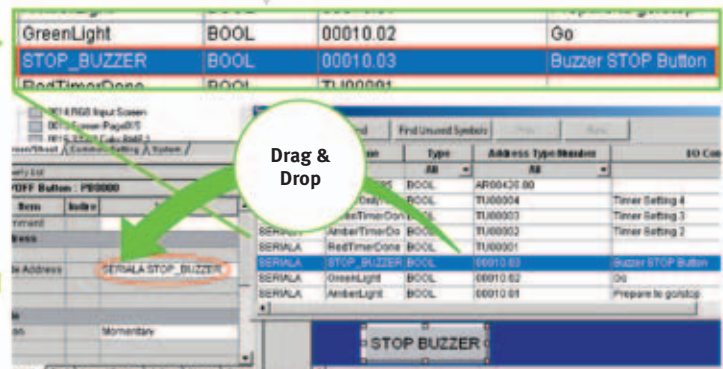

(3) Allocations for buttons and lamps can also be checked on the screen using comments imported from the CX-Programmer.

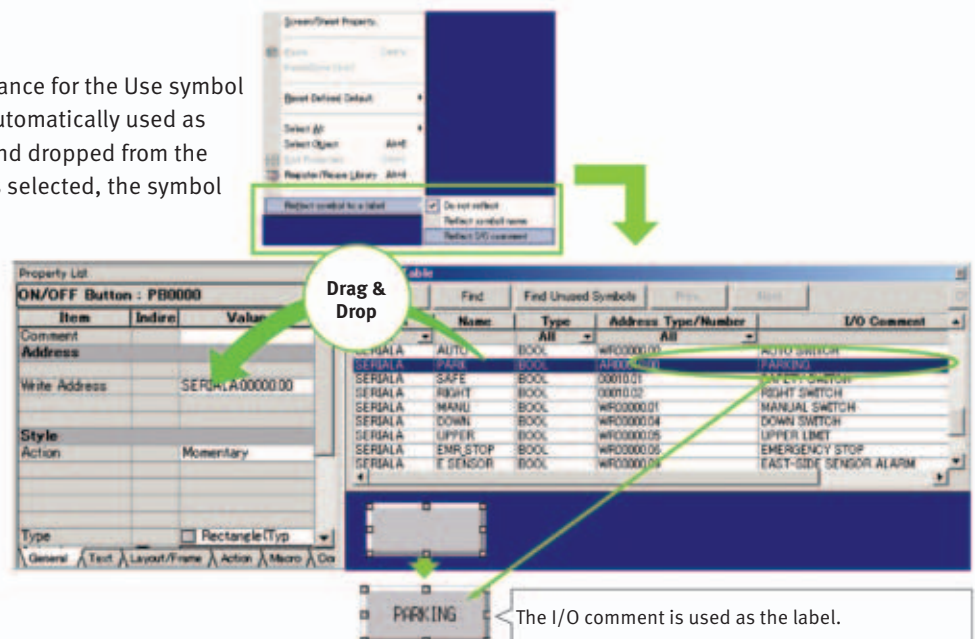

Example of easy address allocation

(2) Check the comment then drag-and-drop the symbol from the symbol table to the property list.

Example of reading I/O comments

If Use I/O comment is selected in advance for the Use symbol text as label, the I/O comments are automatically used as labels when addresses are dragged and dropped from the symbol table. (If Use symbol names is selected, the symbol names are used as the labels.)

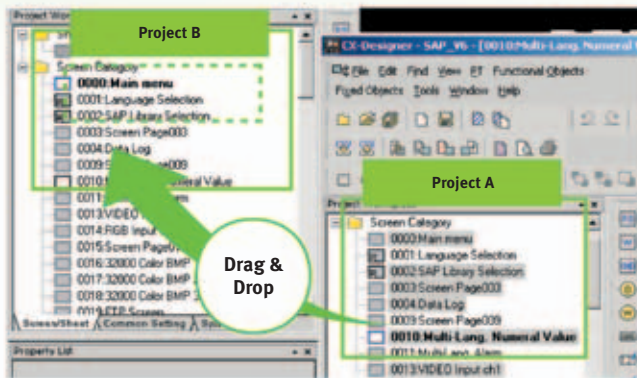

Reading another project's screens and objects

Resources from another project can be easily reused by just selecting the screen or objects that you want to read and dragging and dropping it, so screens can be created intuitively.

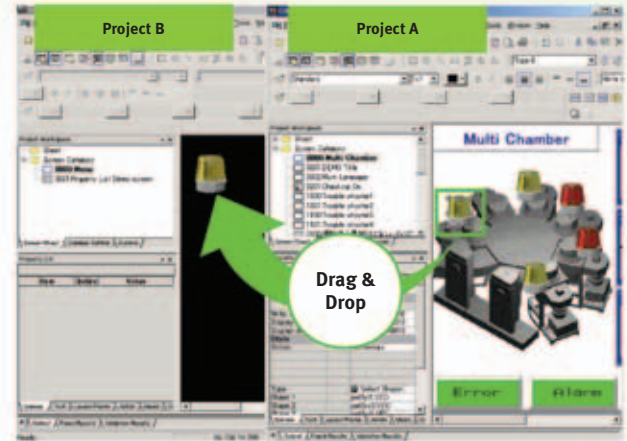

Example screen 1

Select the screen that you want to read, drag it to the destination and drop it.

Example screen 2

Select the part that you want to read, drag it to the destination and drop it.

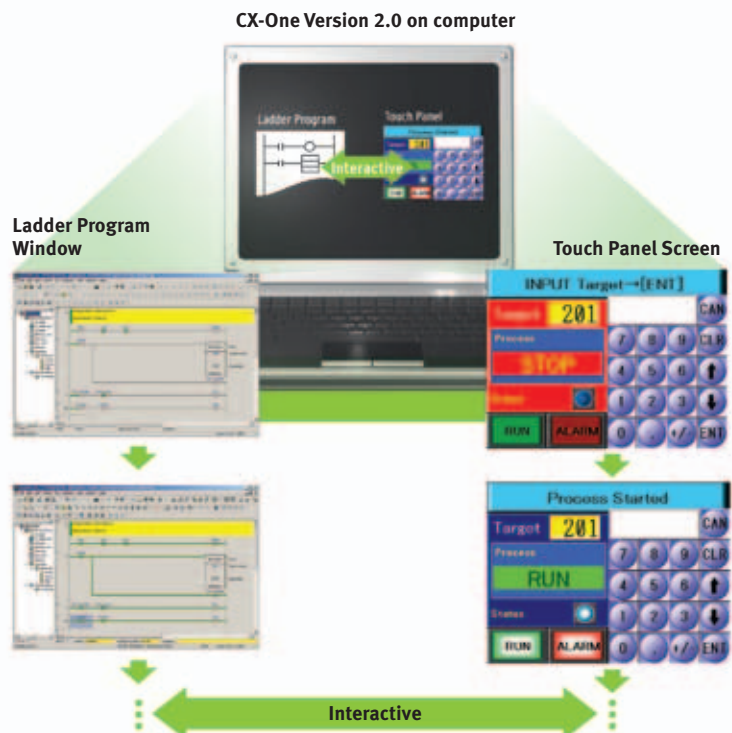

Reading CAD Files

It is possible to import DXF files by dragging and dropping them. The files are read as a diagram, and so less capacity is used than with images. It is also easy to customize the diagram by changing the shape or colour.

The screen data and ladder program can be checked simultaneously in the computer

The CX-Designer and CX-Programmer interconnects the test functions in the computer through the CX-Simulator. The screens and ladder program checks are performed simultaneously, which significantly increases debugging efficiency. The CX-Programmer also has a new button for integrated simulation. And, work efficiency is further improved with the ability to keep required work screens pinned on front and to zoom in or out as desired.

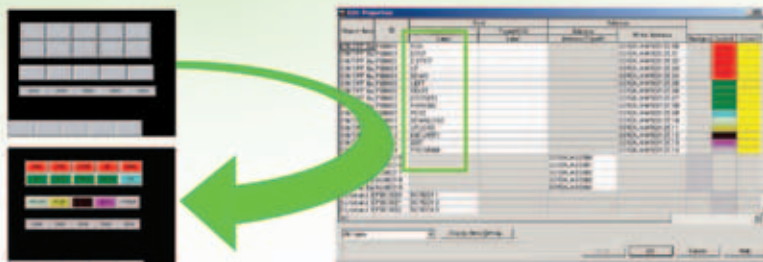

Editing of multiple objects

Addresses and other settings, such as labels and colours, can be set together in a list, making editing operations much more efficient. When the common attributes (such as background colour and text colour) of multiple parts are being changed, the attributes can be changed together using the property list.

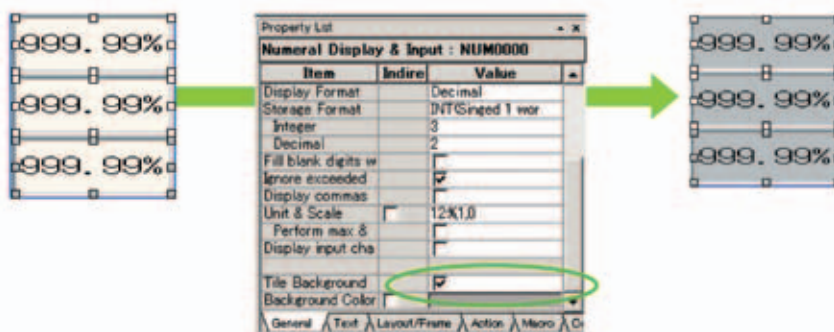

Example screen 1

After editing the settings in the list, press the OK Button to make the new settings effective immediately.

Example screen 2

If the background colour is changed from white to grey in the property list, the background colour is changed for all of the selected objects.

Editing of overlapping objects

The Select Object command is a powerful tool when you want to edit objects hidden by overlapping. A filter function can also be used to aid editing by displaying only the objects to be edited.

Object Selection Window

Right-click and select Select Part to display the objects (all types) on the screen.

All types		Range Selection	Release All
O	Object Comment	ID	X Y
B		PL0000	96 136
B		PL0001	200 136
B		PL0002	304 136
B		PL0003	408 136
B		PL0004	96 184
B		PL0005	200 184
B		PL0006	304 184
B		PL0007	408 184
B		PL0008	96 232
B		PL0009	200 232
B		PL0010	304 232
B		PL0011	408 232
B		PL0012	96 280
B		PL0013	200 280
B		PL0014	304 280
B		PL0015	408 280
B		LBL0016	72 168
B		LBL0017	96 80

Filter Function

Use the Select Part command's filter function to select the objects (ON/OFF Button) that you want to edit.

Only the edited object is displayed and it can be edited easily.

260,000-colour Video Display

NS-CA001 Video Input Unit Four video inputs or CCD cameras can be connected and up to four images can be displayed simultaneously if the image size is 320x240 pixels. The NS-CA001 cannot be used with the NS5 or the NS15.

NS-CA002 RGB/Video Input Unit There is an analog RGB input terminal in addition to the two video input terminals. Either of the video signals or the analog RGB signal can be displayed on the NS-series HMI. The NS-CA002 cannot be used with the NS5.

Also compatible with Omron Vision Sensors.

Analog RGB Output

The NS screen viewed on another monitor.

The NS15 screen (XGA) can be displayed on another on-site display that has RGB inputs.

FTP function.

FTP (File Transfer Protocol) allows texts, lists and recipes to be replaced with the put/get command from your computer! You can even replace BMP files.

WEB interface

Monitor and operate the full content of any NS screen on a connected web browser. You can control the full application running on the HMI and even retrieve the log files.

User security functions

Operator access rights and the operating format can be set to one of five password levels.

Each operator can be given one of 5 password levels using the User Security (level authentication) function. A password level can be set for each object, so various objects can be made inoperable or hidden based on the operator's access level.

Operator passwords are managed in 5 levels. Passwords can be up to 16 characters long and the access rights increase as the level number increases.

Password		Low High	Level 1 Level 2 Level 3 Level 4 Level 5
Level1	Line Operator		
Level2	Group Leader		
Level3	Line Manager		
Level4	Maintenance		
Level5	Administrator		

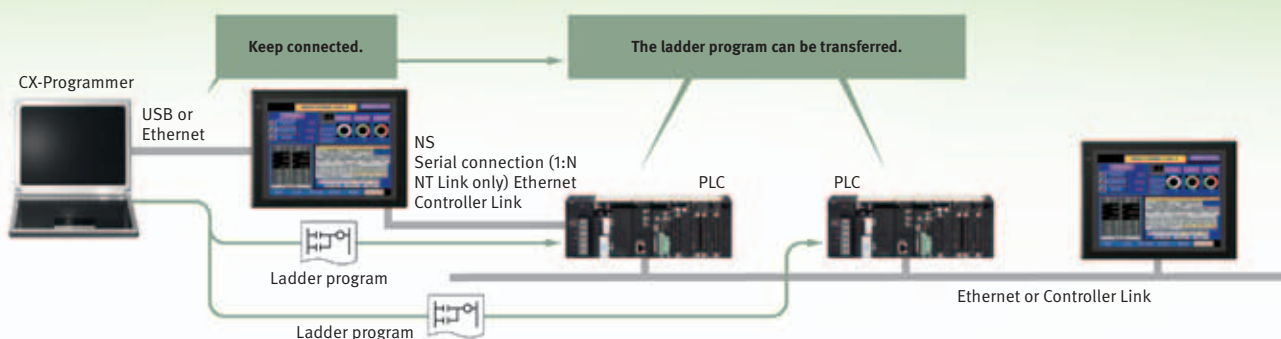

The operator cannot manipulate objects with a password level (authentication level) higher than the operator's login level.

Single Port Multi Access (SPMA)

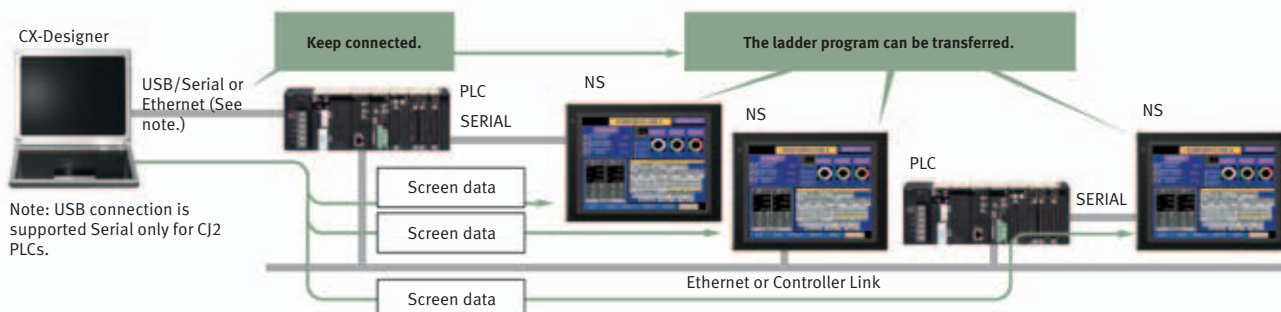

Transfer ladder program data to the PLC via the HMI. Perform online editing via the HMI.

[Computer (Serial/USB) → NS-series HMI (Ethernet) → PLC (Ethernet or Controller Link) → PLC]

Transfer screen data via the PLC.

[Computer (Serial) → PLC (Ethernet or Controller Link) → NS-series HMI]

Note: SPMA can be used in CS/CJ-series PLCs with lot number 030201 or later.

Note: SPMA via a PLC is not supported when a CP-series PLC is connected. (SPMA via an NS-series HMI is supported with a CP-series PLC.)

Easy automatic connection

A search is automatically made for the PLCs connected to the HMI and the results are displayed using the automatic online connection in the CX-Programmer. Just select a PLC from the list to connect. This function is also supported for PLCs over network layers.

PLC Data Trace

The PLC data trace function can be used without a computer.

The PLC Data Trace function is built into the HMI in addition to the Ladder Monitor and Device Monitor. A bit's status and operation can be viewed in a time chart just by setting the desired PLC bit's address in the HMI. It is also now possible to display word data, save data in CSV files, and save time chart screens in BMP files.

Note 1: There are differences between this Data Trace function and the CX-Programmer's Data Trace function. Refer to the NS-series Programmable Terminal Programming Manual (Cat. No. V073) for details.

Note 2: The PLC data trace function cannot be used with the 5.7-inch model.

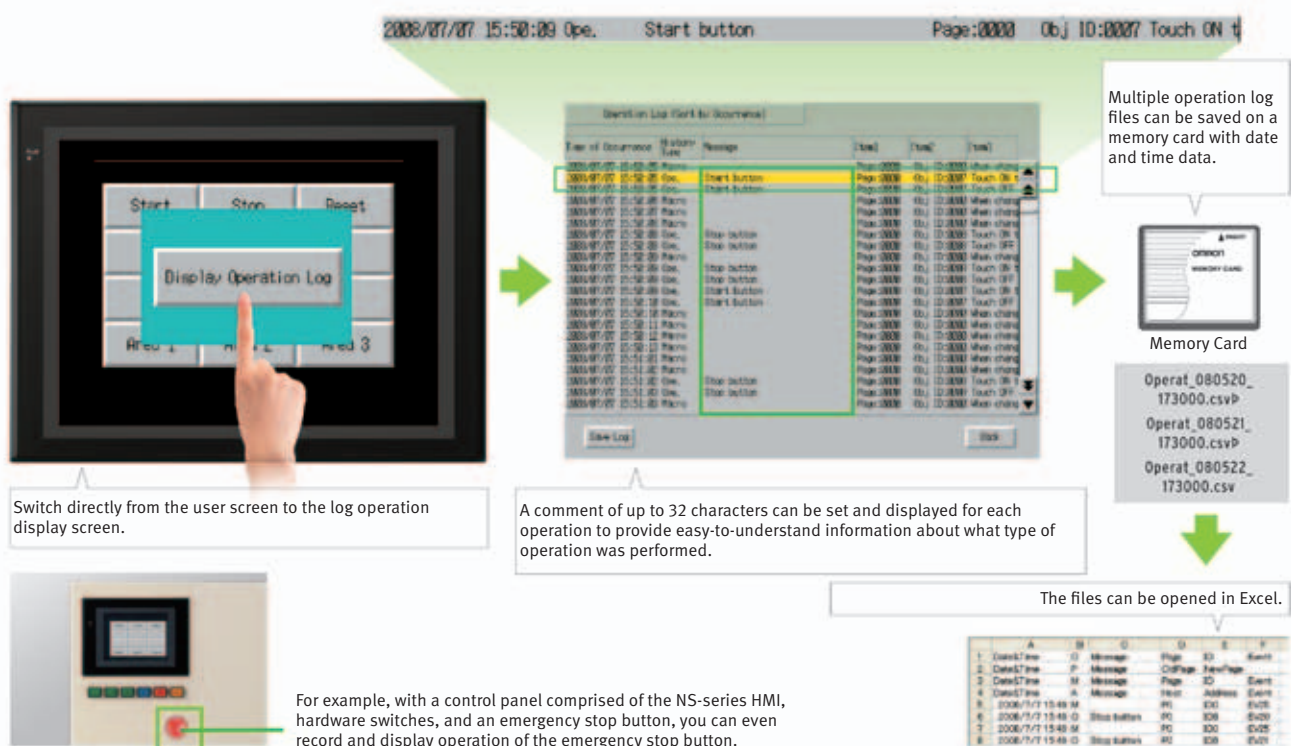

Note 3: The PLC data trace function is not supported for connection with a CP1E PLC.

Operating log

What was touched, when and by whom?

Functionality has been improved with the addition of a log to record operators' use of the panels. It is now possible to record and display the time, date, and operation details for buttons (i.e., hardware switches) pressed on the control panel in addition to operations on the touch panel. The operation log can be saved in a CSV file on a memory card mounted in the NS-series HMI.

Ladder monitor

The ladder program can be monitored without a computer.

Ladder programs with I/O comments can be monitored on the HMI's screen and the ladder program can also be edited with the Programming Console function.

Operation screen

CS/CJ/CP-series PLC

Also meets the requirements of users who need to display devices onsite

Switch Box function

The operator can check the PLC status by displaying just the I/O comments and status.

Device Monitor function

Displays the device's contents, allowing settings to be input and checked and making startup operations more efficient.

Switch Box function

Easy checking the alarm bit and shortens searching time.

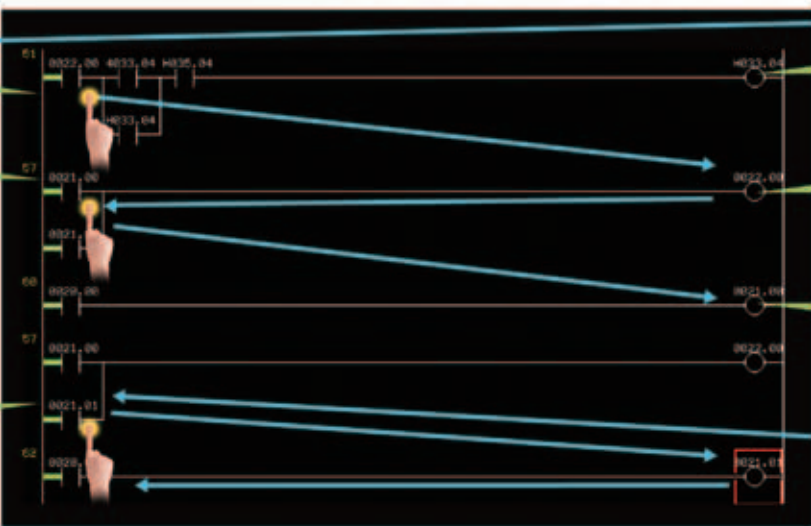

When an alarm occurs, touch the message to automatically search for the alarm bit (output bit) for the alarm. This enables you to quickly check the alarm address and investigate why the bit turned ON.

“Find Back”, “Find Next”, useful function supported by the NS-series.

Reduced Time to Investigate Which Output or Input Is Causing the Problem.

Device Monitor function	Operation with NS-series HMI	CX-Programmer
Find the address at specified by the cursor.	Next	“N” Key
Find the output from the input bit or find the input bit from the output at the cursor.	Double-click	“Space” Key
Return to the previous search position.		“B” Key

2. Is this input the cause? What output corresponds to this input?

4. Which of these two inputs is the cause? Let's look at CIO 21.00 first.

6. So is it input CIO 21.01 after all?

Yes, the problem is here!

1. Why is this output not turning ON?

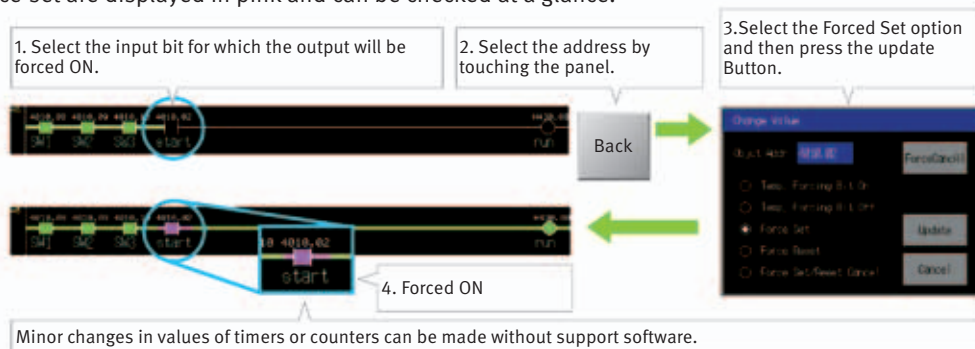

3. Why is this output not turning ON?

5. There's no problem with input CIO 21.00. Let's go back to the previous program section.

Back

Force-setting and force-resetting are possible

Locations that have been force-set are displayed in pink and can be checked at a glance.

1. Select the input bit for which the output will be forced ON.

2. Select the address by touching the panel.

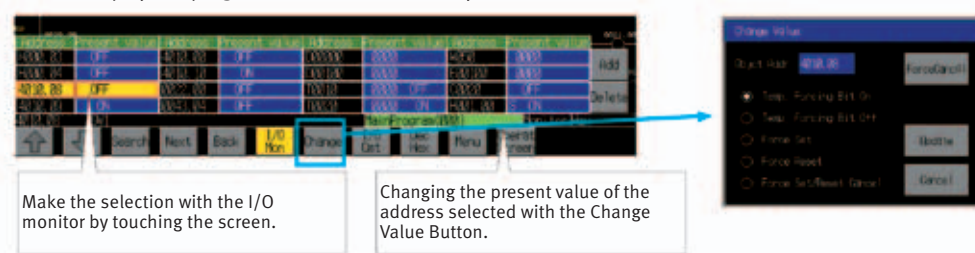

3. Select the Forced Set option and then press the update Button.

4. Forced ON

Minor changes in values of timers or counters can be made without support software.

Check and change I/O While You View the Ladder Diagram on the I/O Monitor

Display and change the present value by specifying the address. It is also possible to force-set/reset bits with the I/O monitor.

Make the selection with the I/O monitor by touching the screen.

Changing the present value of the address selected with the Change Value Button.

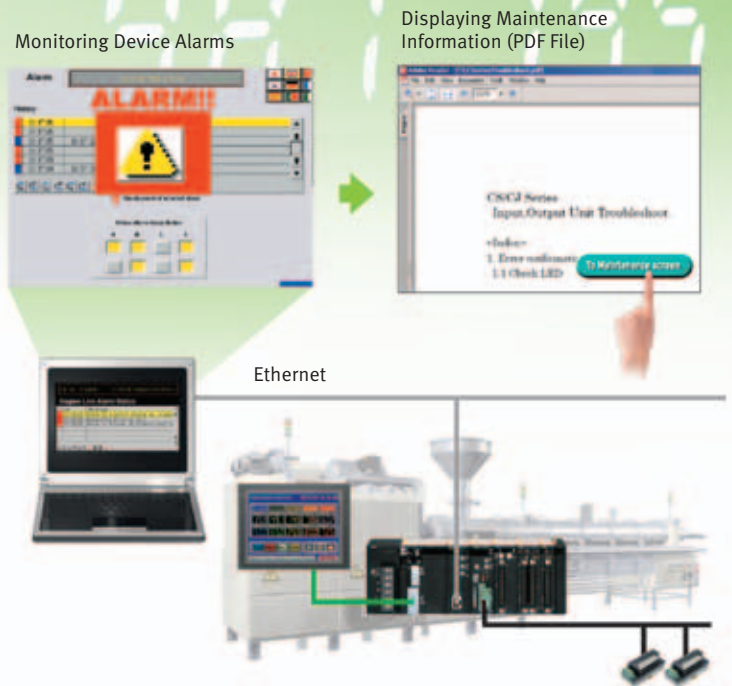

Note: The Ladder Monitor function is not supported by the 5.7-inch models.

NS-NSRCL (NS-Runtime)

Achieve machine/line monitoring and data logging on your office computer.

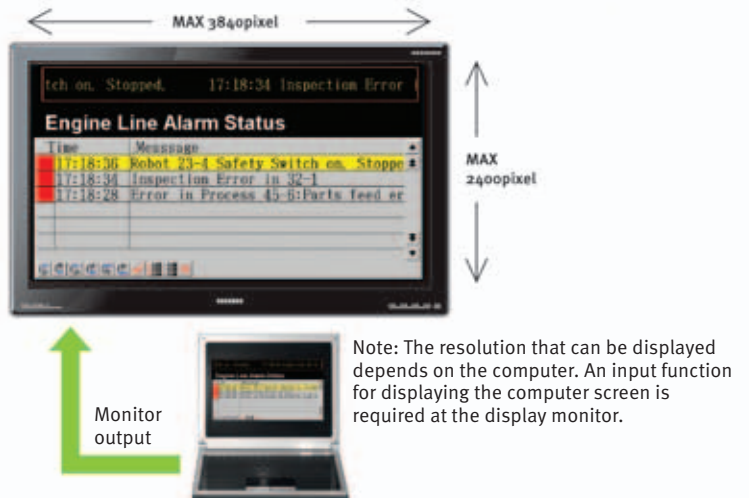

Machine Viewer

Machine viewer in an office environment. There is no need to create complex host applications. Moreover, when an alarm occurs, a PDF file can be displayed as maintenance information. NS Series screens can be reused on the computer and screens can be also newly created independently of touch panels at the production site.

Wide Screen

Computer output can be displayed on another wide-screen monitor. XGA (1,024 x 768 dots) and up to a maximum screen size of 3,840 x 2,400 is supported. Alarms occurring in devices or the line can be monitored.

Data logger

Log large amounts of data using a personal computer. Data can be logged through background processing, with up to 160,000 points stored in one file. The logged data is stored in CSV format, and data can be displayed on data log graphs.

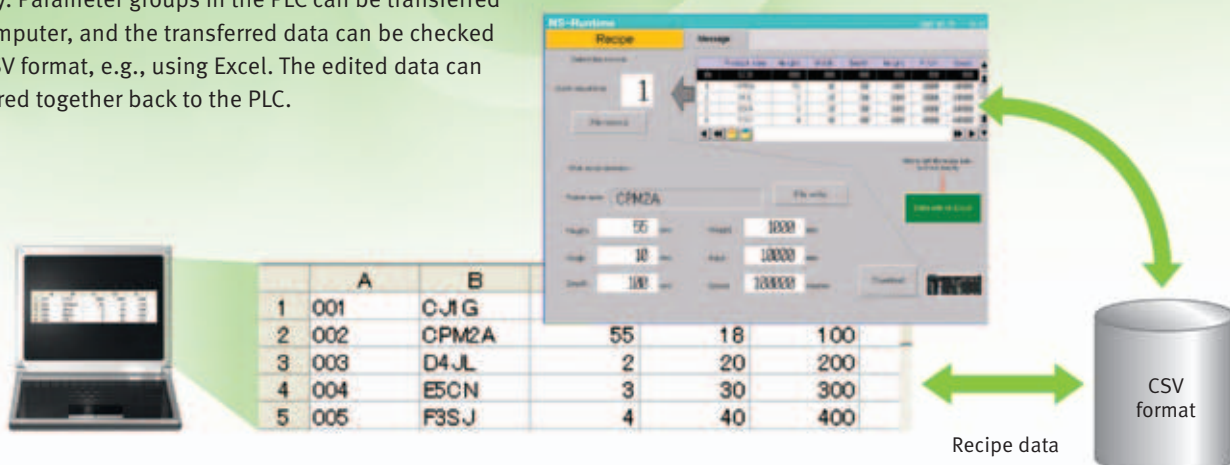

Example: 160,000 Points

Data can be logged for approximately 7.4 days, assuming data is logged every two seconds for 12 hours a day. By using automatic file saving, data logging can be continued even longer than 7.4 days.

Recipe handling

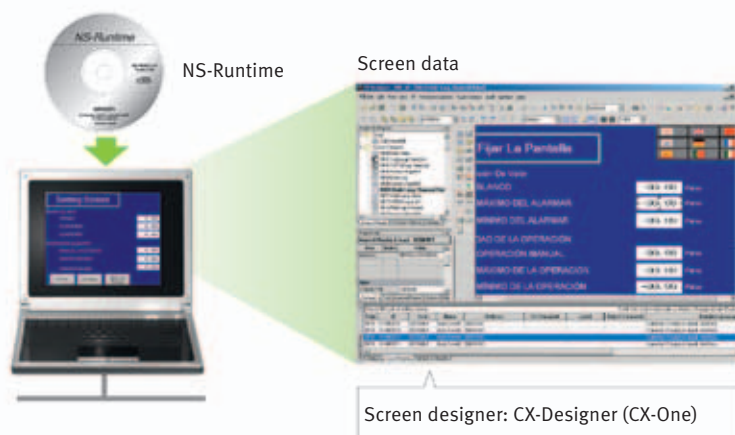

Checking machine data or switching processes from a host computer is easy. Parameter groups in the PLC can be transferred together to a computer, and the transferred data can be checked and edited in CSV format, e.g., using Excel. The edited data can then be transferred together back to the PLC.

Easy installation

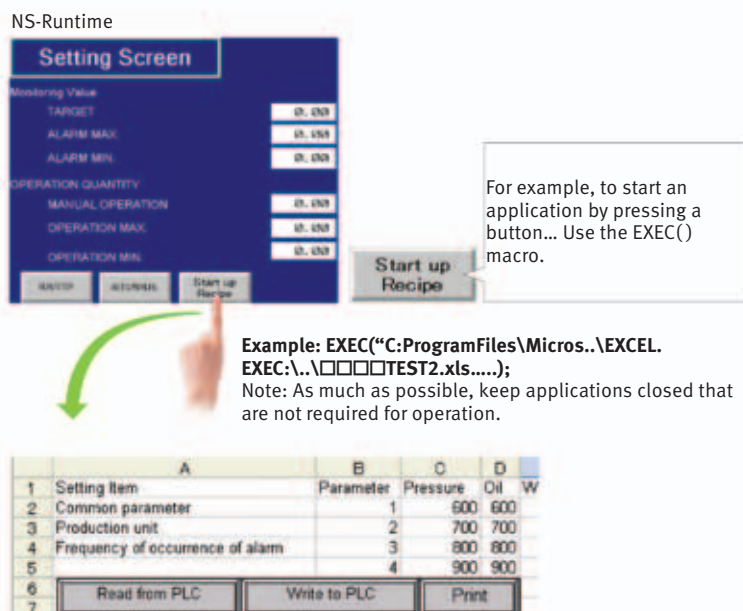

To get started, just install the NS-Runtime in the computer and place the screen data in the applicable folder. NS/NSJ-series screens and NS-Runtime screens can all be managed using one single tool.

Note: The NS-Runtime will operate in a computer environment even if the CX-Designer is not installed. The hardware key (USB dongle) that is supplied with the NS-Runtime is required for operation.

Application startup function

User applications can be started from NS-Runtime. Applications can be started simply by pressing buttons on the screen.

- Note 1: If the screen data is converted from the NS Series, NS-Series HMI system versions must be 8.1 or lower.
- Note 2: Do not use this product for 24-hour operation in an FA environment. Omron shall not be responsible if the computer or application does not operate properly due to noise or other causes. Omron shall not be responsible for any problems that may be caused by any applications other than Omron products.

NSH5 Series

A hand-held version of the NS5 is now available to perform operations at the production site. The NS-series HMI's have a complete set of functions that can be used at the production site, such as the SAP Library, multi-language support, and Programming Console functions.

Function Switches
Use the ten functions switches. F1, F2, F6, F7: Wired outputs F3 to F5, F8 to F10: Communications outputs

Memory Card Interface and USB Slave Connector.

Emergency Stop Switch.
3PST-NC Structure
DPST-NC: Increase safety (wired outputs). SPST-NC: Input to internal NSH5 memory, output to a lamp for emergency stop switch operation, or output via communications, e.g., to a PLC.

Water Resistance to IP65
The water-resistant structure is equivalent to IP65 on all surfaces. The HMI may not be suitable for use in environments with long-term water exposure.

HMI and Cable Sold Separately
Select the Cable according to the application (RS-232C/RS-422A). Connector-loose wires, UL connector, 3 m or 10 m.

3-Position Enable Switch
Increased safety with DPST-NO structure (wired outputs).

Ordering Information

International Standards

- The standards are available as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

Programmable Terminals

Product name	Specifications				Model	Standards
	Effective display area	Number of dots	Ethernet	Case color		
NS5-V2 *1	5.7-inch STN monochrome	320 × 240 dots	No	Ivory	NS5-MQ10-V2	UC1, CE, N, L, UL Type4

NS-Runtime

Product name	Specifications		Media	Model	Standards
NS-Runtime	NS-Runtime Installer, PDF manual, hardware key (See note.)	1 license	CD	NS-NSRCL1	—
		3 licenses		NS-NSRCL3	
		10 licenses		NS-NSRCL10	

Note: A hardware key (USB dongle) is required for NS-Runtime operation.

System Requirements

Item	Specifications
OS	Windows XP (Service Pack 3 or higher), Vista, or 7 (Support 64-bit version only for Windows 7.)
CPU	Celeron, 1.3 GHz or higher (recommended)
Memory size	HDD: 50 MB min., RAM: 512 MB min. (Windows 7: 1 GB min.). 50 MB is required for the Runtime alone. (An additional 280 MB is required if CX-Server is not already installed.)

Software

●How to select required support software for your controller

The required support software depends on the controller to connect. Please check the following table when purchasing the support software.

Item	Omron PLC System	Omron Machine Automation Controller System
Controller	CS, CJ, CP, and other series	NJ-series
Programmable Terminals	NS-series	NS-series with an Ethernet port
Software	FA Integrated Tool Package CX-One	Automation Software Sysmac Studio

●FA Integrated Tool Package CX-One

Product name	Specifications	Number of licenses	Media	Model	Standards
FA Integrated Tool Package CX-One Ver.4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. Windows XP (Service Pack 3 or higher), Vista or 7 Note: Except for Windows XP 64-bit version CX-One Version 4.□ includes CX-Designer Ver.3.□. For details, refer to the CX-One catalog (Cat. No. R134)	license *1	DVD	CX-ONE-AL01-EV4	—

*1. Multi licenses are available for the CX-One (3, 10, 30, or 50 licenses).

●Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications	Number of licenses	Media	Model	Standards
Sysmac Studio Standard Edition Ver.1.□	The Sysmac Studio provides an integrated development environment to set up, program, debug, and maintain NJ-series Controllers and other Machine Automation Controllers, as well as EtherCAT slaves. Sysmac Studio runs on the following OS. Windows XP (Service Pack 3 or higher, 32-bit version) /Vista (32-bit version) /7 (32-bit/64-bit version)	- (Media only)	DVD	SYSMAC-SE200D	—
	The Sysmac Studio Standard Edition DVD includes support software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units and support software for creating screens on HMIs (CX-Designer). For details, refer to the Sysmac Integrated Catalogue (P072).	1 license*	—	SYSMAC-SE201L	—

Note: To connect the NJ-series Controller, NS system version 8.5 or higher is required. CX-Designer version 3.3 or higher is also required.

* Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses).

Cable

Product name	Specifications		Model	Standards
Cable *1 	Screen transfer cable for DOS/V (CX-Designer ↔ PT)	Length: 2 m	XW2Z-S002	—
	USB-Serial Conversion cable	Length: 0.5 m	CS1W-CIF31	N
	USB relay cable	Length: 1 m	NS-USBEXT-1M	—
NSH5 Cables	RS-422A cable (loose wires + D-Sub 9-pin)	Length: 10 m	NSH5-422CW-10M	—
	RS-232C cable (loose wires + D-Sub 9-pin)	Length: 3 m	NSH5-232CW-3M	
	RS-232C cable (loose wires + D-Sub 9-pin)	Length: 10 m	NSH5-232CW-10M	
UL-compliant NSH5 Cable	RS-422A cable (loose wires)	Length: 10 m	NSH5-422UL-10M	CU
	RS-232C cable (loose wires + relay cable)	Length: 3 m	NSH5-232UL-3M	
	RS-232C cable (loose wires + relay cable)	Length: 10 m	NSH5-232UL-10M	
PT-to-PLC Connecting Cable *2	PT connection: 9 pins	Length: 2 m	XW2Z-200T	—
	PLC connection: 9 pins	Length: 5 m	XW2Z-500T	
	PT connection: 9 pins	Length: 2 m	XW2Z-200T-2	
	PLC peripheral port	Length: 5 m	XW2Z-500T-2	
NSH5 Removable Box Cable	RS-232C cable (connectors)	Length: 3 m	NSH5-232CN-3M	
		Length: 10 m	NSH5-232CN-10M	
NSH5 Removable Box	—		NSH5-AL001	
NSH5 Wall-mounting Bracket	—		NSH5-ATT02	
NSH5 Visor	—		NSH5-ATT01	

*1. Use a standard USB Type A male to Type B type male cable to connect the NS series PT to a personal computer (CX-Designer).
Use a standard USB cable to connect the NS series PT to a PictBridge-compatible printer. USB cable type depends on the printer.

*2. To connect the NS series PT to NJ series controller, using a commercially available 10/100-BASE-TX twisted-pair cable.
For detail, refer to the NS series SETUP MANUAL (Cat. No.V083).

Options

Product name	Specifications		Model	Standards
Video Input Unit 	Inputs: 4 channels Signal type: NTSC/PAL		NS-CA001	UC1, CE
	Input channels: 2 video channels and 1 RGB channel *1 Signal type: NTSC/PAL		NS-CA002	
Special Cable for the Console	Cable length: 2 m		F150-VKP (2 m)	—
	Cable length: 5 m		F150-VKP (5 m)	
Controller Link Interface Unit 	For Controller Link Communications		NS-CLK21	UC1, CE
RS-422A Adapter 	Transmission distance: 500 m total length Note: Use this model when connecting PT models without a V□ suffix. Note: PT models with the V□ suffix can also be connected.		NS-AL002	—
	Transmission distance: 50 m total length Note: Only PT models with a suffix of V□ are connectable. Use the NS-AL002 to connect models without a V□ suffix.		CJ1W-CIF11	UC1, N, L, CE
Sheet/Cover *2 	Anti-reflection sheets (5 surface sheets)	NS15	NS15-KBA04	—
		NS12/10	NS12-KBA04	
		NS8	NS7-KBA04	
		NS5	NT30-KBA04	
	Protective covers (5 pack) (anti-reflection coating)	NS12/10	NS12-KBA05	
		NS8	NS7-KBA05

Attachment	NT625C/631/631C Series to NS12/10 Series		NS12-ATT01	
	NT625C/631/631C Series to NS12/NS10 Series (Black)		NS12-ATT01B	
	NT610C Series to NS12/10 Series		NS12-ATT02	
	NT620S/620C/600S Series to NS8 Series		NS8-ATT01	
	NT600M/600G/610G/612G Series to NS8 Series		NS8-ATT02	
Memory Card 	128 MB		HMC-EF183	
	256 MB		HMC-EF283	
	512 MB		HMC-EF583	
Memory Card Adapter	---		HMC-AP001	CE
Replacement Battery	Battery life: 5 years (at 25°C)		CJ1W-BAT01	—
Bar Code Reader	CCD handheld bar code reader (RS-232C interface)		V520-RH21-6	

*1. One screen cannot display two video inputs simultaneously.

*2. A Chemical-resistant Cover (NT30-KBA01) is available only for the NS5.

General Specifications

NS5/NS8/NS10/NS12/NS15

Series	NS5-V2	NS8-V2	NS10-V2	NS12-V2	NS15-V2
Rated power supply voltage	24 VDC				
Allowable voltage range	20.4 to 27.6 VDC (24 VDC $\pm 15\%$)				
Power consumption	15 W max.	25 W max.			45 W max.
Ambient operating temperature	0 to 50 °C (See note on the next page.) Note: The ambient operating temperature is subject to the following restrictions according to the mounting angle. Mounting angle of 0 to 30° to the horizontal: • When no Expansion Units are mounted, the operating temperature range is 0 to 45°C. • When a Video Input Unit or a Controller Link Interface Unit is mounted, the ambient operating temperature is 0 to 35°C. Mounting angle of 30 to 90° to the horizontal: Operating temperature range of 0 to 50°C				
Storage temperature	-20 to 60 °C *1				
Ambient operating humidity	35 to 85% (0 to 40 °C), 35 to 60% (40 to 50 °C) (with no condensation)				
Operating environment	No corrosive gases.				
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power lines).				
Vibration resistance (during operation)	10 to 57 Hz, 0.075 mm amplitude, 57 to 150 Hz, 9.8 m/s ² 30 min each in X, Y, and Z directions				5 to 8.4 Hz, 3.5 mm single amplitude, 8.4 to 150 Hz, 9.8 m/s ² 10 min times each in X, Y, and Z directions
Shock resistance (during operation)	147 m/s ² 3 times each in direction of X, Y, and Z				
Weight	1.0 kg max.	2.0 kg max.	2.3 kg max.	2.5 kg max.	4.2 kg max.
Degree of protection	Front operating panel: Equivalent to IP65 oil-proof type and NEMA4 UL type 4. *2 Note: May not be applicable in locations with long-term exposure to oil.				
Ground	Ground to 100 Ω or less.				
Battery life	5 years (at 25 °C): Replace battery within 5 days after the battery runs low (indicator lights orange).				
Applicable standards	Certified for conformance to UL 508, UL 1604, EMC Directive, NK, and LR Standards.				

*1. Operate the PT within the temperature and humidity ranges shown in the right diagram.

*2. Support for NS5, NS10, NS12 and NS15.

NSH5 Hand-held PT

Series	NSH5-V2	
Type	5.7-inch Color TFT (Hand-held Version)	
Case colour	black	
Built-in Ethernet port	No	
Model	NSH5-SQR10B-V2 (Emergency stop button: Red)	NSH5-SQG10B-V2 (Stop button: Gray)
Rated power supply voltage	24 VDC	
Allowable voltage range	20.4 to 27.6 VDC (24 VDC $\pm 15\%$)	
Power consumption	10 W max.	
Ambient operating temperature	0 to 40 °C	
Storage temperature	-20 to 60 °C	
Ambient operating humidity	35% to 85% (0 to 40 °C) with no condensation	
Operating environment	No corrosive gases.	
Noise immunity	Common mode: 1,000 Vp-p (between power supply terminals and panel) Normal mode: 300 Vp-p Pulse width: 100 ns to 1 μ s, Rise time: 1-ns pulse	
Vibration resistance (during operation)	10 to 57 Hz, 0.075 mm amplitude, 57 to 150 Hz, 9.8 m/s ² 30 min each in X, Y, and Z directions	
Shock resistance (during operation)	147 m/s ² 3 times each in direction of X, Y, and Z	
Weight	1 kg max.	
Degree of protection	Equivalent to IP65.	
Ground	Ground to 100 Ω or less.	
Battery life	5 years (at 25°C): Replace battery within 5 days after the battery runs low (indicator lights orange).	
Applicable standards	Certified for conformance to UL 508, EMC Directive, and EN 60204-1.
